March 20, 2026

VIA EMAIL DELIVERY

Project: **3500 Paul Sweet Road**
Santa Cruz, CA

Re: 3rd Party Review and Support
SLS Project # 3.2496

SOCOTEC Life Safety (SLS) has been retained by Dominican Oaks, Dominican Hospital and Common Spirit Health to provide an evaluation of the potential impacts of a proposed development on two properties owned and operated by CommonSpirit Health in Santa Cruz, CA. The two properties are:

Dominican Hospital
1555 Soquel Drive
Santa Cruz, CA 95065

Dominican Oaks
3400 Paul Sweet Road
Santa Cruz, CA 95065

The analysis has been prompted by a proposed multifamily/residential project that is to be constructed at 3500 Paul Sweet Road in Santa Cruz, CA. The residential project is intended to be sited and constructed under the state's Housing Accountability Act-HAA (Government Code ARTICLE 10.6. Housing Elements [65580 - 65589.11]). The project developers are utilizing the "Builders Remedy" provision of the HAA (Government Code § 65589.5). This provision limits a jurisdiction's ability from disapproving projects simply based on noncompliance with generally accepted local planning and zoning laws.

The 3500 Paul Sweet Road project (APN No. 025-013-37)[1] includes:
- Six story building consisting of 105-unit multifamily rental apartments
- 74 Garage Parking Spaces

Information[2] provided by the developer (Workbench) during the January 14, 2026 planning commission hearing indicates a total of 68 parking spaces will be provided including some that utilize multilevel/mechanized parking equipment. That same presentation also indicates that occupant amenity spaces, occupant storage, and bike storage will also be provided.

[1] Santa Cruz County-Community Development and Infrastructure

[2] Workbench Presentation/Developer Slide Show

To identify concerns and determine the potential impact of this development on the two unique properties mentioned above, a review of the impact on specific elements associated with the proposed development has been undertaken. Specifically, the review includes:

a) Identification of fire/life safety issues and related public health concerns
b) Recommendation regarding whether the project approach will impact building and fire code provisions on the existing Common Spirit Health buildings (Dominican Oaks, Dominican Hospital) based on compliance with applicable codes and standards
c) Identification of specific compliance issues as it relates to property setbacks, available fire protection features, and access to the existing buildings.

The specific items considered include:

a) Evaluation of anticipated fire/smoke movement from interior fire originating in the new residential building and impact on occupant safety and fire department operation.
b) Evaluation of anticipated fire/smoke movement from exterior fire originating in the parking and storage spaces associated with the new residential building.
c) Identification of access issues to the existing Common Spirit Health buildings because of the new residential construction project. This will include access by fire department apparatus (engine/ladder trucks) as well as emergency medical service (EMS) access.
d) Consideration of existing emergency action plans/emergency preparedness criteria maintained by Common Spirit Health for their existing facilities.

1. PROJECT BACKGROUND

The intent of this report is outlined in and is consistent with the scope of work section of the March 6, 2026, SOCOTEC Life Safety proposal. The approach taken for the report preparation includes the following:

- Review of information submitted to the county for the project.
- Consideration and evaluation of information known about the proposed development.
- Evaluation and review of applicable building code and fire code considerations applicable to any type of multifamily dwelling project that would be proposed in the county including supplemental provisions adopted by the county.
- Identification and evaluation of fire safety, fire protection, and emergency planning measures that the new development might impose on the existing buildings.

The report does not address the appropriateness of other considerations that are not in direct relation to typical building, emergency planning, and regulatory criteria. This includes items such as zoning, available parking criteria, aesthetics of the building design, and other factors that are typically not considered as part of the built environment criteria for fire protection, building code, and life safety code compliance. In addition, the report does not nor can it be considered as a full code compliance review as specific architectural drawings, specifications, or other customary drawings and information unique to this project have not been provided or are not available.

Workbench, a multidisciplinary company, provides a range of services including development, permitting, design, and construction expertise on residential projects with a focus on providing affordable housing in California. Their portfolio includes single-family homes, auxiliary dwelling units, and multifamily residential projects.

The 3500 Paul Sweet Road project involves construction of a six-story multifamily building that will include 105 individual dwelling units. The project will be located on a largely vacant parcel of land. The immediate areas surrounding the project site include a cemetery and a senior living facility. Other buildings and property use within 1,000 feet of the new project site include an acute care hospital, an electrical utility transmission yard (Paul Sweet Substation-Pacific Gas and Electric), single family homes, and miscellaneous businesses. Figure 1 shows the location for the new project and the surrounding area.

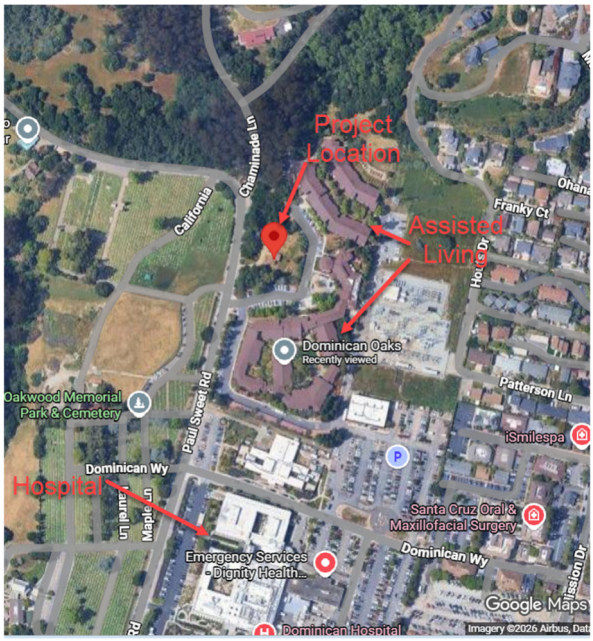

Figure 1: Proposed Project Site and Surrounding Area

It is anticipated that the new residential project, if allowed to proceed, will ultimately have to show compliance with all applicable provisions contained in the California

Building Code (CBC) and the California Fire Code (CFC). To the best of our knowledge, detailed design and construction plans have not been completed or made available to the county plan reviewers. This report makes no claim as to the level of compliance regarding those codes as it relates to the new project.

As indicated in the purpose statement of the CBC shown here, the building code addresses a wide range of public health and safety issues as does the CFC. The requirements contained in the building code are predominately directed at the new building being designed or considered. However, some of those provisions are also extended to address potential hazards and risks to adjacent buildings and properties.

[A] 101.3 Purpose.
The purpose of this code is to establish the minimum requirements to provide a reasonable level of safety, health and general welfare through structural strength, means of egress, stability, sanitation, light and ventilation, energy conservation, and for providing a reasonable level of life safety and property protection from the hazards of fire, explosion or dangerous conditions, and to provide a reasonable level of safety to fire fighters and emergency responders during emergency operations.

Common Spirit Health has identified eight areas of interest regarding the potential impact that the new residential project will have on the two buildings. We specifically address those eight items as they relate to each building. We conclude with general observations and notes regarding the project. Parts of the evaluation criteria can be applied to both the hospital facility and the assisted living facility. In other cases, the evaluation criteria are only applied to one of the facilities.

1.1 Dominican Hospital

Dominican Hospital is a 222 bed state licensed general acute care hospital. (HCAI ID: 106440755; CMS Provider #: 050242). As such, it is subject to an array of code provisions that are spread among several state and federal agencies. As of February 14, 2025, (updated to January 7, 2026) the facility is shown as being in the "Accreditation with Full Standards Compliance" category by The Joint Commission[3]. The eight areas of interest identified by Common Spirit Health are as follows.

1. Identify and explain the fire risks associated with the development site and adjacent proximate area, including the hospital. The separation distance between the proposed development and the hospital is approximately 1,000 feet at the closest points between the structures. Requirements contained in the California Building Code (CBC) for fire separation distance rules generally do not extend beyond building separation distances that are more than 30 feet. The proposed residential project would be subject to these requirements, thus there is no obvious concern for this aspect. In addition, the materials of construction for the proposed residential project would also be subject to fire performance criteria

[3] American Hospital Directory

and evaluation. Those materials wouldn't impose any undue risk to a building or facility that is many hundreds of feet away.

2. Summarize county and area fire history. A brief history of fire and other emergency events is provided on the county fire department website. Our research indicates that the most devastating fires in the county are related to wildfire events as opposed to individual structural fires. Several of these fires resulted in direct property loss and loss of life. I These include:
    a. Summit Fire-May 2008. Loss Impacts: 4,270 acres; 35 homes; 64 outbuildings.
    b. Martin Fire-June 2008. Loss Impacts: 520 acres; 12 structures homes; 4 civilian injuries.
    c. Trabing Fire-June 2008. Loss Impacts: 630 acres; 10 homes; 10 outbuildings.
    d. Lockheed Fire-August 2009. Loss Impacts: 7,817 acres; 13 structures; 10 civilian injuries.
    e. Loma Fire-September 2016. Loss Impacts: 4,474 acres; 12 homes; 16 outbuildings. (NB: The fire was primarily in Santa Clara County along the border with Santa Cruz County. Santa Cruz County resources were utilized.)
    f. Bear Fire-October 2017. Loss Impacts: 400 acres; 4 structures; 9 fire fighter injuries.
    g. CZU Lightning Complex Fires-August 2020. Loss Impacts: 86,509 acres; 1,490 structures; 1 civilian injury; 1 civilian fatality.

    Beyond fire events, the county was also at the epicenter of the 1989 Loma Prieta earthquake. Both the magnitude of the earthquake as well as the large geographic area impacted required fire department resources to not only consider fire suppression operations but also search and rescue operations. California first responder agencies are among the most well-equipped and well-trained groups in the US to conduct operations for wildfire events as well as earthquake events.
3. 150-foot hose pull requirements. This provision is evaluated only for the new residential project and is addressed in the Dominican Oaks portion of the report. It has to do with hydrant spacing and location along with fire department vehicle access points and the ability for first responders to bring hose lines to all sides of the building or structure. There is no obvious concern for this aspect.
4. Applicant's proposed fire truck locations (Sheet AP0.52 of Applicant's submittal). This provision is evaluated only for the new residential project and is addressed in the Dominican Oaks portion of the report. It has to do with fire department vehicle access points and the ability for first responders to position fire apparatus

and bring hose lines to all sides of the building or structure. There is no obvious concern for this aspect.

5. Evacuation of elderly, mobility and memory challenged residents of adjacent retirement community in the event of a fire at the proposed residential tower. This provision is addressed in the next section specifically for the Dominican Oaks facility.
6. Evacuation of staff and completely immobile patients from the hospital in the event of a fire at the residential tower spreading in the direction of the hospital. Evacuation of any type of health care occupancy is a measure of last resort. Evacuation procedures and protocols for a variety of events (typically referred to as all hazard scenarios) must be developed, prepared, practiced, and updated as necessary to address the specific procedures and protocols. Health care provider entities in the United States are required to provide emergency preparedness plans to address various events that could potentially impact a facility. Requirements for such plans and types and levels of information to be included are codified in the Centers for Medicare & Medicaid Services (CMS), Emergency Preparedness (EP) Rule[4]. A geographic location such as Santa Cruz County would be expected to have written plans in place to deal with: fire/smoke events occurring within the facility requiring either relocation of patients to different compartments or floors, or in a worst-case scenario an evacuation of the building; fire events such as a wildfire that produced threatening levels of smoke that could infiltrate or overwhelm the facility HVAC system resulting in an evacuation of the facility; a seismic event resulting in compromised structural members in the building requiring evacuation of the facility; a prolonged utility outage (water, electricity) that prohibits the facility to continue its operations resulting in an evacuation of the facility. We have not been provided with a copy of the EP plan for the hospital however, we would be willing to provide a cursory review. The hospital appears to have adequate access and outlet points for vehicles involved in a total facility evacuation. The EP plan will have to be reviewed to determine if the proposed project site was intended to be used for staging or other uses associated with that evacuation plan.
7. Access Roads. This provision is evaluated only for the new residential project and is addressed in the Dominican Oaks portion of the report. It has to do with first responder vehicle access points and equipment positioning.
    a. (Includes: i. Multiple access points for structures exceeding 30 feet in height. ii. Aerial Firefighting apparatus requirements for buildings exceeding 30 feet in height. Minimum unobstructed width for aerial access

[4] CMS Emergency Preparedness Rule

roads. Proximity to building: a. Between 15 and 30 feet from the building. b. Parallel to one entire side of the building. c. East side versus the taller north side (Sheet AP3.01).
iii. Dead-End Roads: Minimum turnaround dimensions along the single two-lane access road

8. Collapse Zones. This provision is evaluated only for the new residential project and is addressed in the Dominican Oaks portion of the report. The hospital property is well outside of any collapse area or zone as it relates to the proposed new project.

1.2 Dominican Oaks

Dominican Oaks is a 206-unit state licensed Residential Care Facility for the Elderly (RCEF) facility. (Facility Number: 440708773-CDSS[5]). The license allows up to 142 residents who require some level of assisted living care. As such, it is subject to an array of code provisions that are spread among several state agencies. The Dominican Oaks buildings and property are in close proximity to the proposed development site. As such, there are several building and fire code provisions that must be considered for the design of the new residential project. As part of this portion of the analysis, we have relied on a set of "Not for Construction" (NFC) Planning Package drawings" (PLN250515-3500) and information that the developer presented at the January 14, 2026 planning meeting. The NFC drawings are considered as being preliminary and are not the drawings that would be submitted to obtain a building permit.
The eight areas of interest identified by Common Spirit Health are as follows.

1. Identify and explain the fire risks associated with the development site and adjacent proximate area, including the hospital. The proposed building is normally described as a podium style building. It utilizes a "5 over 1" approach whereby there are five stories of residential construction over the one-story podium. This is a common approach for residential construction in the US and is permitted by the CBC.

   The separation distance between the proposed development and the Dominican Oaks property line requires additional scrutiny. Rendered drawings (26/51) shown in the Workbench presentation on January 14, 2026 indicate the footprint of the building will be directly adjacent to the Dominican Oaks property line. For example, the distance between the foot print of portions of the proposed residential project and the Dominican Oaks property line is shown to be as little as 17 inches The CBC contains different provisions regarding building setbacks from property lines and adjacent structures. These criteria are primarily concerned with the 'fire separation distance' , FSD. CBC: Chapter 2 defines FSD as follows.

   Fire Separation Distance. The distance measured from the building face to one of the following:
   1. The closest interior lot line.
   2. To the centerline of a street, an alley or public way.

[5] California State Portal

3. To an imaginary line between two buildings on the lot.
The distance shall be measured at right angles from the face of the wall.

Based on the FSD, the CBC includes criteria that is increasingly more conservative the smaller the FSD is. These include:

CBC: Table 705.5 requires exterior walls for residential buildings to have minimum 1-hour fire resistance ratings when the fire separation distance (FSD) is less than 5 feet.

CBC: Table 705.9 regulates the allowable opening percentage on an exterior wall as a function of the FSD. In this case, openings include doors and windows. Limits include:
-No openings are allowed in the exterior wall when the FSD is less than 3 feet.
-Up to 15 percent of openings allowed in the exterior wall when the FSD is between 3 feet and 5 feet.

The table include gradations for other FSD values but these two give an example of the restrictions that would be placed on the exterior walls that face the Dominican Oaks property lines. Once an FSD is 20 feet or greater, there are no limits in the wall opening percentages in buildings that are protected with an automatic sprinkler system.

It is presumed that if the project were to move forward, detailed architectural drawings suitable for obtaining a building permit and showing the specific FSD's to the Dominican Oaks property lines coupled with how the allowable openings were to be managed would be provided. Part of the FSD criteria is to allow properties that are adjacent to a new project to retain their own property development rights. For example, if Dominican Oaks decided to expand their surface parking, they retain a right to provide such a feature up the property line. As it stands now, any dwelling unit walls that come within 3 feet of the Dominican Oaks property lines could not have any windows or doors facing those property lines.

A related provision for the FSD relates to the allowable projections that are allowed. CBC: Table 705.2 provides requirements for projections that extend off the exterior wall of the building. This would include architectural features such as balconies. Restrictions in the table include:
-No projection is permitted when the FSD is less than two feet.
-The projection must be a minimum of 40 inches from the property line when the FSD is five feet or more.
This requirement in the code addresses concerns if combustible materials were used to construct the balcony (or other projection) or that combustible contents such as patio furniture or decorations are stored on the balcony.

2. Summarize county and area fire history. Please see Item 2 under the discussion for the hospital.

3. 150-foot hose pull requirements. This item has to do with hydrant spacing and location along with fire department vehicle access points and the ability for first responders to bring hose lines to all sides of the building or structure. The discussion here also relates

to Items 4 and 7. CFC: 503.1.1 requires a fire apparatus access road to extend to within 150 feet of all sides of a building and the exterior walls. Substantial portions of the building and exterior walls on the Plan North, South, and East sides do not achieve this code requirement unless the access is provided via the private drive and property of Dominican Oaks. Unless an easement was offered by Dominican Oaks to allow such access, the CFC provision is not achieved. In addition, if such an easement was offered, it might restrict/preclude use of that lane and the adjacent Dominican Oaks property from being used for other purposes. Those include reconfiguration of parking spaces, construction of a utility or storage shed, or other changes that revise the geometry of the area. It is also noted that a wall (estimated to be 8 to 10 feet in height in some areas) is to be constructed on the Plan North and South sides. (See NFC Drawing GP0.06 (6/41)). It is likely such a wall will hinder fire department access to those other sides when having to be accessed by the adjacent private property.

4. Applicant's proposed fire truck locations (Sheet AP0.52 of Applicant's submittal). As noted in Item 3, the CFC has criteria regarding building access by fire department vehicles. The residential project has a single access point from Paul Sweet Road to what would be considered the front/main entrance of the building. That access point satisfies the dimensional criteria of CFC: 503.2.1. Paul Sweet Road is a public thoroughfare and does not represent any dead end or turning radius concerns (CFC: 503.2.3, 503.2.4, 503.2.5). NFC Sheet AP0.52 (27/41) of Applicant's submittal is highlighted to show using the Dominican Oaks private drive as a set up area for fire apparatus responding to a fire in the residential tower. As noted in Item 3, that is not a by-right provisions unless Dominican Oaks provides an easement or agreement of some sort. If that were to be agreed upon, then a further evaluation of the CFC: Section 503 provisions would have to be undertaken regarding vehicle weights, the private drive dimensions, dead end limits and vehicle tuning radius. The landscape, vegetation and elevation features between the private drive and the project site may hinder those potential access points from being practical to use during a building emergency at the project site.
   Fire apparatus set up locations and equipment staging on Paul Sweet Road will also need approval from the fire department. Specifically, the road width and ladder truck/tower set ups regarding possible obstructions from trees and overhead utility lines.

5. Evacuation of elderly, mobility and memory challenged residents of adjacent retirement community in the event of a fire at the proposed residential tower. Dominican Oaks has a detailed evacuation and emergency plan for its residents[6]. As currently written, the plan does account for hazard events that occur outside of the facility, including events that occur off property such as wildfire events. If a catastrophic fire event took place at the residential project site, residents who had private vehicles parked in the front of the

[6] Dominican Oaks- Emergency & Disaster Evacuation Plan

Dominican Oaks facility would be unable to reach their vehicle based on smoke movement and migration. The same concern exists for other hazard events at the residential property location such fire suppression operations that would block the Dominican Oaks driveway or a catastrophic building failure and collapse. These scenarios must be considered given that the Level 2 and Level 3 evacuation scenarios of the Emergency & Disaster Evacuation Plan indicates that personal vehicles can be used by residents who have a car at the facility.

6. Evacuation of staff and completely immobile patients from the hospital in the event of a fire at the residential tower spreading in the direction of the hospital. This provision was addressed in the previous section specifically for the Dominican Hospital facility.

7. Access Roads. Parts of this provision are also considered in Items 3 and 4. Other information for this portion of the report centers on additional requirements of the CFC dealing with position and location of aerial fire apparatus. As noted previously, the only available fire department access is from Paul Sweet Road. CFC: D105 supplements the general fire apparatus criteria regarding ladder trucks and similar equipment. One of those elements requires the aerial equipment to be positioned no closer than 15 feet and no further than 30 feet from the building. (CFC:D105.3) We have estimated that the closest the apparatus could be positioned on Paul Sweet Road is between 35 to 40 feet.

8. Collapse Zones. This provision is primarily directed at the potential for a catastrophic collapse at the residential tower. While building collapse is rare, it can be precipitated because of a fire, flood, seismic, snow, or wind event. Degraded building construction materials or poor design can also be a factor. For first responders, a collapse zone would be identified for evolving or escalating incidents that impact structural integrity regardless of cause.

   NFPA 1550: *Standard for Emergency Responder Health and Safety*, 2024 Edition provides this definition.

   3.3.35.2 Collapse Zone.
   The area that is exposed to trauma, debris, and/or thrust should a building or part of a building collapse.

   The standard further requires the zone to be established as follows:

   10.7.4.4.4.2
   Collapse zones shall be established around the perimeter of the building at a distance that is equal to a minimum of 1.5 times the height of the building.

   The height of the proposed residential project is estimated to be 60 feet thus if a collapse zone is established, it would encompass a radius of approximately 90

feet. This includes portions of the Dominican Oaks facility private drive and surface parking. It also covers the community wing of the building itself.

2. GENERAL OBSERVATIONS

During review of the information provided, there are some additional items that we are pointing out for consideration. These are focused on available water supplies to protect different areas of the proposed development and the availability of the components and features of those systems.

1. Fire Hydrant Spacing/Location. CFC:507.5 and Appendix C address the location and spacing requirements for fire hydrants. The two base requirements are that one hydrant must be within 400 feet of the fire apparatus access road (measured around the exterior of the building) and a hydrant must be within 100 feet of the fire department connection (FDC) for a building standpipe system. While these locations and dimensions need to be field verified, we have noted the presence of two nearby hydrants on Paul Sweet Road. One is to the south of the project site (towards Dominican Way) and is approximately 540 feet away. The other hydrant is to the north adjacent to Chaminade Lane and is approximately 170 feet away. Although the Chaminade Lane hydrant is within 400 feet of the front portion of the development site, it does not meet the limits regarding the access measurement around the building. Neither hydrant would satisfy the 100 foot limit for the standpipe FDC thus the residential project would be expected to install at least one additional fire hydrant along this route.

   Although there are additional fire hydrants located along the private drive owned and operated by Dominican Oaks, that portion of the water supply and the associated appurtenances including the hydrants are not part of the public system. Such configurations are governed and regulated by NFPA 24, *Standard for the Installation of Private Fire Service Mains and Their Appurtenances*. NFPA 24 is one of the referenced standards in the CFC. This system has been installed to provide supplemental water supplies for any fire events occurring at the Dominican Oaks property. Its suitability to be relied on for fire suppression operations at other properties is unknown

2. Water Supply and Sprinkler System Demands. A mechanical car stacker is shown on the presentation materials[7] that would be utilized as part of the parking criteria. The currently available design criteria for sprinkler system design and parking garages utilizing this type of technology utilize an Extra Hazard Group 2[8] design approach according to NFPA 13, *Standard for the Installation of Sprinkler Systems*. This design requires substantial flow and pressure from the system. As an example, the system flow alone is a minimum of 1,000 GPM. An additional 500 GPM must also be allocated for

[7] Workbench Presentation. P. 25/51
[8] NFPA 13: A.4.3.4.2

exterior firehose for use by the fire department. The residential project design would have to develop water supply test data for this portion of the county to evaluate if these demands can be met. If they can't, then installation of a ground water storage tank and fire pump will have to be considered on the residential project site.

3. Vulnerability During Construction. Our report does not have any detailed information regarding the construction classification for the residential portions of the building. Typically, in the US, the podium portion (lowest level) of this type of design utilizes fire resistive construction. The other levels are permitted to utilize wood frame construction. This is a consistent and accepted design throughout the US. During the construction process, the wood frame construction will be exposed and unprotected during various portions of the construction schedule. It is crucial for the developer to ensure that they are adhering to and enforcing all of the requisite provisions of the CFC[9] regarding buildings under construction.

4. Wildland-Urban Interface. The proposed project site is in an area that is surrounded on three sides by various forms of vegetation, plants, and trees. In addition, some new plantings and trees will be added to the front portions of the building. The area of 3500 Paul Sweet Rd. is shown as being in a 'Moderate Fire Hazard Severity Zone'[10]. As such, proposed construction projects require additional scrutiny to address concerns over ignition and fire spread in these interface areas. California projects require additional analysis coupled with mitigation measures including restrictions on certain types of building construction materials, property line or adjacent building setback requirements, management of vegetation, and design of defensible spaces that can include use of hardscape materials adjacent to the building. Santa Cruz County adopts the *California Wildland-Urban Interface Code (*WUIC*)*. The WUIC is intended to be used and applied to projects that are sited in in such hazard prone areas.

3. CONCLUSION

This report evaluates the potential impacts of a proposed residential development adjacent to two properties operated by Common Spirit Health. It does not provide a detailed code analysis of the proposed residential project, but rather how the location could impact the two properties. It also addresses some of the potential demands on the available county water supplies based upon some of the features that have been noted in the developer's presentation materials.

While it is anticipated that the items identified in this report will be considered and addressed during the design stage, they nonetheless have been recognized as requiring some additional or special attention if the project were to proceed.

The information in this report is based on the documents made available, the interpretation and meaning of the descriptions in those documents. The documents reviewed in connection with the report included information provided by the client, California unique laws and codes, locally

[9] CFC: Chapter 33
[10] CAL FIRE FHSZ Map

adopted bylaws and codes, applicable federal criteria, and nationally recognized standards. We reserve the right to modify or amend this report upon receipt of updated or additional materials.

Prepared by:

Robert E. Solomon, P.E. [CA FP 1164]

Date:	March 20, 2026
To:	Michael Taylor
Company:	Pillar Construction Management (PCM)
Address:	804 San Gabriel Ave. Henderson, NV 89002
Copy To:	Jesse Martinez, PCM
From:	Jeff Weckstein
Project Name:	3500 Paul Sweet Rd Development APN 025-013-37 Application No.241360 3500 Paul Sweet Road, Santa Cruz
Walker Project Number:	33-002694.00

Project Background

Pillar Construction Management (the "Client") is assisting CommonSpirit Health with understanding potential impacts related to a proposed six-story, approximately 105-unit residential project in Santa Cruz County that is under review by the County Planning Commission (3500 Paul Sweet Rd Development - APN 025-013-37 Application No.241360 3500 Paul Sweet Road, Santa Cruz). The proposed project is immediately adjacent to the Dominican Oaks Assisted Living Facility, owned by CommonSpirit, which is, in turn, adjacent to CommonSpirit's Dominican Hospital. The project proposes reduced on-site parking, including vehicle parking stackers, and would use a single driveway on Paul Sweet Road for site access.

During January 14, 2026, Santa Cruz County Planning Commission hearing for the Project, the Planning Commission continued the item and requested additional analysis related to several items, including

1. Parking demand and resident parking behavior
2. On-street parking impacts
3. Hospital ER access and staff/visitor parking impacts

This parking study is intended to:

- Identify the anticipated need for parking spaces in the proposed 105-unit apartment complex (the "Project") with the range of unit types and sizes proposed by the applicant.
- Identify parking behavior reasonably expected by residents of the apartment Project that are not assigned on-site parking spaces.
- Identify how parking for the Project may impact access to the hospital ER and parking for staff and visitors to the hospital.
- Identify alternative strategies to accommodate the anticipated demand for parking that may not be satisfied, if any, by the Project's on-site parking supply proposed by the Project applicant.

Proposed Project

Walker staff received several files related to the Project at 3500 Paul Sweet Road, including the Project applicant's presentation to the planning commission on January 14, 2026, and a site plan package dated March 2025. For this analysis, Walker has utilized the project description information in the Planning Commission presentation.

The 3500 Paul Sweet Road project consists of the construction of 105 multi-family (apartment) dwelling units: 30 studio units, 60 1-bedroom units (the majority of which are considered "junior" one-bedroom units), and 15 2-bedroom units. Six (6) units are designated as extremely low-income (ELI) units. The Project plans to provide 68 off-street parking spaces, of which 22 would be in car puzzle 'stacker' spaces. The Project would also provide 127 class I and 26 class II bicycle parking spaces.

Projected Parking Requirements of 3500 Paul Sweet Road Project

Based on the applicant's current submittal, the county code parking requirement for the project is 138 spaces 68 more than the 68 off-street parking spaces proposed by the Project.

Existing Conditions in Project Vicinity

Walker staff visited the project site area on Monday, March 2, 2026, to review the existing on- and off-street parking supply and parking demand in the immediate vicinity of the project site, review posted parking regulations and observe p.m. peak period conditions on Paul Sweet Road at the Paul Sweet Road-SR-1 Ramps/Soquel Drive intersection.

Figure 2, on the next page, shows the on- and off-street parking facilities reviewed, along with the existing parking inventory. Parking inventories on-street, and at Oakwood Memorial Park & Cemetery, Dominican Oaks and the parking areas east of Dominican Oaks were verified in the field. Parking inventories at Dominican Hospital parking facilities were provided by CommonSpirit.

Within the study area, Walker noted that on-street parking on Paul Sweet Road is unrestricted (no time limits) during the day and evening; however, parking on Paul Sweet Road is prohibited between 12:00 a.m. and 6:00 a.m. (no overnight parking).

Walker staff collected parking occupancy counts at 10:00 a.m., 2:00 p.m. (peak times for hospitals), and 8:00 p.m. on Monday March 2, 2026.

Table 1 summarizes the parking inventory and observed occupancies in the study facilities.

Table 1: Study Area Parking Inventory and Occupancy

Facility	Inventory Total	Occupancy		
		10:00 AM	2:00 PM	8:00 PM
Paul Sweet Rd west of Chaminade Lane	10	0	0	0
Paul Sweet Rd. between Chaminade and Salisbury	45	39	39	8

		73%	77%	Collected Facilities - 40%

Note: Empty spaces in Lot 2 include 14 spaces blocked off, and empty spaces in Lot 3 include 8 spaces used for storage.

At 2:00 p.m., there were 90 parking spaces available near the proposed Project site (Paul Sweet Road west of Chaminade Lane, Dominican Way reserved patient spots, Oakwood Memorial Park and Cemetery Lot, Dominican Oaks parking lot).

Figure 1: Study Area and Parking Inventory

Source: Walker Consultants, CommonSpirit

Observed activities and information noted by Walker staff include the following:

- Parking at Dominican Hospital was generally full during the day in Lots 2-4, except for spaces blocked by barriers or taken up for storage.
- Open spaces in Lot 5 were generally ADA, EV, or patient parking spaces.
- Open spaces in Lot 8 were typically reserved for a specific user group.
- Lot 9 had availability throughout the day.
- Parking on Dominican Way was reserved for lifestyle management patient parking during the day, in the evening, when unreserved, it appeared that night shift employees park in those spaces.
- Parking demand on Paul Sweet Road appeared to be related to Dominican Hospital employees, and in some cases, visitors/patients.
- Dominican Hospital has a lease agreement to park at the Oakwood Memorial Park and Cemetery parking lot adjacent to Paul Sweet Road. Parking activity in this lot appeared related to Dominican Hospital employees and emptied out in the evening. The parking lot and its entrances are very dark at night.
- Parking in the unstriped lot north of the PG&E Paul Sweet Substation appeared related to the substation or to Dominican Oaks.
- On-site parking demand at Dominican Oaks was consistent throughout the day and evening at 53-57% occupancy. PCM reported to Walker that Dominican Oaks is 95% occupied with 212 current residents. Currently, there are 40-50 employees on the day shift, with overnight staff typically five.

Observations at Paul Sweet Road-US-1/Soquel Drive Intersection

Walker briefly reviewed both a traffic study previously prepared by Dominican Oaks (pre-Covid) and the traffic study prepared by the 3500 Paul Sweet Road Project applicant. In both instances, the intersection of Paul Sweet Road with the US-1 Ramps and Soquel Drive was projected to operate acceptably even in the horizon year, with project conditions.

Dominican Oaks residents raised concerns about queuing on Paul Sweet Road during the p.m. peak hour when day-shift employees at Dominican Hospital are leaving for the day, including about traffic backups at the intersection.

During the site visit, Walker staff observed operations of the intersection during the p.m. peak period from 4:30 to 5:30 p.m. Within this limited observation period, Walker staff did not observe any queueing issues. While the queue of vehicles waiting on Paul Sweet Road reached 12-15 vehicle lengths (250-300 feet) back from the intersections, in most instances, all vehicles queued at the intersection before the light turned green cleared during that cycle (i.e., no drivers had to wait two cycles at the traffic light). Paul Sweet Road did not appear to be part of the ambulance route to the hospital, with ambulances likely using the Hospital's signalized access point at the Hospital Drive-Commercial Crossing/Soquel Drive intersection since it is the most direct route to the ambulance bays, which have access from Hospital Drive.

During the observations, most of the vehicles observed approaching the intersection on Paul Sweet Road (heading southbound on Paul Sweet Road to Soquel Drive) originated from Brookwood Drive or north of Dominican Way; it appeared that the Paul Sweet Road/Dominican Way access point is a tertiary access point for the Hospital, with Paul Sweet Road mainly serving Lots 2-4. Walker noted that Lot 1, which is the hospital's patient parking lot, does not currently have access on Paul Sweet Road as the driveway is blocked with bollards.

Spillover Parking Behavior

As noted previously, the projected parking demand generated by the Project exceeds the proposed on-site parking supply by 45 spaces.

This could potentially lead to spillover parking into surrounding sources of available parking supply, including the following:

- On-street parking on Paul Sweet Road. With the overnight parking restrictions, parking on Paul Sweet Road could only accommodate short-term resident parking and residential guest parking.
- Oakwood Memorial Park and Cemetery: This lot currently has availability during the day and is empty at night. Residents may be inclined to park in this lot and take their chances with Dominican Hospital Parking enforcement.
- Dominican Oaks: Residents and visitors to the Project may attempt to park in visitor and EV parking spaces at Dominican Oaks. Parking in 'reserved' spaces seems less likely due to the potential for parking enforcement actions.
- Dominican Hospital lot 4 – this is the closest Dominican Hospital parking to the Project. While it is 100% full during the day, residents of the Project may attempt to park in this lot after hours when it is less full. If residents were to remove their vehicles from this slot before it fills again, it may not be a big issue; however, it could become an issue if vehicles were left longer. Hospital parking enforcement would have to monitor this lot.
- Dominican Hospital Lot 3 is gated and would be inaccessible to potential spillover parkers.
- Dominican Hospital Lot 2 does not have access off of Paul Sweet Road and would be less attractive to spillover parkers than the Cemetery, Dominican Oaks, and Lot 2.
- The eight on-street spaces on Dominican Way that are for patients from 7am-5pm and night shift employees at night would be a second alternative on the east side of Paul Sweet Road to spillover parkers.
- Lot 5 and Lot 8 (ED Lot) are further from the project and less attractive for spillover parkers.

It is Walker's opinion that the most likely parking areas to be affected by spillover parking are the Cemetery lot, Lot 4, and Dominican Oaks. These three locations, along with the potential removal of overnight parking restrictions on Paul Sweet Road, could accommodate the projected spillover parking, but would need to be managed effectively to avoid impacting daytime parking operations at Dominican Hospital.

Transportation and Parking Demand Management

Based on Walker's review of the project's potential parking needs and parking conditions in the surrounding area, the Project's implementation of both transportation and parking demand management measures could limit its impact on neighbors' parking supply and increase the Project's attractiveness to potential tenants. Based on Walker's limited observations (one day), there may be enough parking availability in the area to accommodate spillover parking; however, without parking management, the spillover parking could impact parking at Dominican Oaks, Dominican Hospital, and the Cemetery.

Potential recommendations include the following:

- The Project could implement transportation demand management measures that could potentially reduce vehicle ownership rates and reduce spillover parking, such as:
    - Designation of two to three parking spaces for car share vehicles and implement an on-site car sharing program. Studies have shown that car-sharing programs reduce vehicle ownership rates and can reduce the need for a second vehicle in households.
    - Tailored marketing campaigns aimed at attracting Dominican Hospital employees to the development. These employees could walk to work, thereby reducing household vehicle ownership rates.
    - Participation in/advertisement of the County's Go Santa Cruz County commute platform.
- The Project could collaborate with the Oakwood Memorial Park and Cemetery and Dominican Hospital to execute a co-lease of the spaces currently leased by the Hospital, with the Project having access to the spaces from 5:00 p.m. to 8:00 a.m. on weekdays and on weekends (for example). This may require improvements to parking lot lighting and the path of travel from the parking area to the Project.
- The Project could collaborate with Dominican Oaks to utilize their visitor parking spaces at night, and to potentially utilize underutilized reserved spaces at Dominican Oaks.
- The County of Santa Cruz could consider removing the overnight parking restriction on Paul Sweet Road. Walker Consultants does not know the circumstances of the restriction and therefore cannot opine on the likelihood or advisability of such an action.
- The Project could collaborate with Dominican Oaks to utilize select off-street parking areas during off-peak hours (nights and weekends).

Walker notes that collaboration with Dominican Oaks and Dominican Hospital may include the provision of increased parking enforcement by these facilities. In Walker's opinion, collaboration and agreements, with increased enforcement to ensure proper usage of parking facilities, is preferable to a scenario where the Project gets built with no TDM or parking management provisions resulting in unmanaged spillover parking, in turn resulting in Dominican Oaks and Dominican Hospital needing to respond with increased parking enforcement activities and actions (such as booting and towing of unauthorized vehicles).

Subject: Dominican Hospital Helipad Airspace Analysis

Landrum & Brown, Inc. respectfully submits this summary of findings memorandum for the airspace protection surface analysis conducted for the existing helipad operation at the Dominican Hospital in Santa Cruz, CA. L&B was tasked with assessing FAA advisory circular requirements for helipad airspace protection, developing the sloped airspace surface geometry and determining whether the proposed development site at 3500 Paul Sweet Road in Santa Cruz, CA, would penetrate these protected surface heights. The following sections will summarize the data resources, methodology and findings of the analysis.

Data Sources

Federal Aviation Administration (FAA) Advisory Circular (AC) 150/5390-2D, Heliport Design

- This Advisory Circular provides standards for the planning, design, and construction of heliports. Section 2.12, Visual Flight Rules (VFR) Approach/Departure Paths, states that the approach/departure and transitional surfaces provide sufficient airspace clear of hazards to allow safe approaches to and departures from the Final Approach and Takeoff Area (FATO). This document establishes the dimensional criteria and surface definitions used to evaluate potential airspace penetrations.

United States Geological Survey (USGS) 3D Elevation Program (3DEP) Digital Elevation Model (DEM)

- The Digital Elevation Model used in this analysis was obtained from the United States Geological Survey (USGS) 3D Elevation Program (3DEP). The 3DEP program provides publicly available, high-resolution elevation data across the United States. The DEM was used to estimate existing ground elevations at the project site. In addition, USGS world imagery basemap tiles were used to visually confirm site location and surrounding features.

Helipad Location and Elevation Data – Dominican Hospital Helipad

- The FATO location for the Dominican Hospital Helipad and its published elevation of 116 feet above mean sea level (AMSL) was obtained from AirNav. The elevation and operational status were independently verified through the FAA Notice of Airport Airspace Analysis Determination for the alteration of a private-use airport (Filing No. 2025-AWP-2543-NRA).

Development Drawings Provided by Pillar Construction Management

- The client provided a plan-view exhibit and three building section drawings, in image format, of the proposed development at 3500 Paul Sweet Road. No ground survey data or computer-aided design (CAD) files were provided. The drawings included limited building elevation information, which was used to approximate maximum structure heights for the proposed development.

Methodology

Airspace surfaces, including Approach/Departure and Transitional surfaces, were constructed in accordance with the standards and dimensional criteria set forth in FAA Advisory Circular 150/5390-2D. The helipad FATO location and verified elevation of 116 feet AMSL were used as the controlling reference point for development of these surfaces.

In the absence of surveyed ground elevations, a Digital Elevation Model (DEM) from the USGS 3DEP program was used to estimate the average site elevation at 3500 Paul Sweet Road. Based on this dataset, an average ground elevation of approximately 125 feet AMSL was applied across the proposed development footprint. World imagery tiles were used to confirm general site conditions and orientation.

Using the section drawings provided by the client, maximum building elevations were calculated by adding the building heights shown in the sections to the estimated average site elevation. For analytical purposes, the proposed structure was divided into three primary sections: a central portion with an approximate maximum elevation of 208 feet AMSL and two side portions with approximate maximum elevations of 193 feet AMSL. The methodology assumes site grading and excavation consistent with the provided drawings, including greater excavation along the southern and western portions of the structure. The calculated maximum building elevations were then compared against the modeled airspace surfaces to determine potential penetrations or impacts.

Findings

The evaluation of the Approach/Departure and Transitional surfaces associated with the Dominican Hospital Helipad against the building elevations for the proposed development at 3500 Paul Sweet Road indicates that the proposed development would not penetrate any existing airspace surfaces. The table below lists the elevation difference between proposed building heights and the airspace surfaces.

Proposed Development Description	Building Elevation (ft. AMSL)	Approach/ Departure Surface Elevation (ft. AMSL)	Elevation Differential	Surface Penetration
Northern side	193 ft.	210 ft.	-17 ft.	Does not penetrate
Central (max height)	208 ft.	217 ft.	-9 ft.	Does not penetrate
Southern side	193 ft.	220 ft.	-27 ft.	Does not penetrate

Note: Approach/Departure Surface Elevation corresponds to the minimum elevation of the airspace surface directly above the section of the proposed development.

It should be noted that any equipment that is required to construct the proposed development is also required to remain under the heights of the protected airspace surfaces. Graphics and a video animation are also included as part of this deliverable to visually depict the proposed development relative to the existing airspace surfaces.

FCS
An ADEC Innovation

Memorandum

Date: March 23, 2026

Subject: Air Quality Analysis for the Proposed 3500 Paul Sweet Road Development, APN 025-013-37, Application No. 241360, 3500 Paul Sweet Road, Santa Cruz County, California

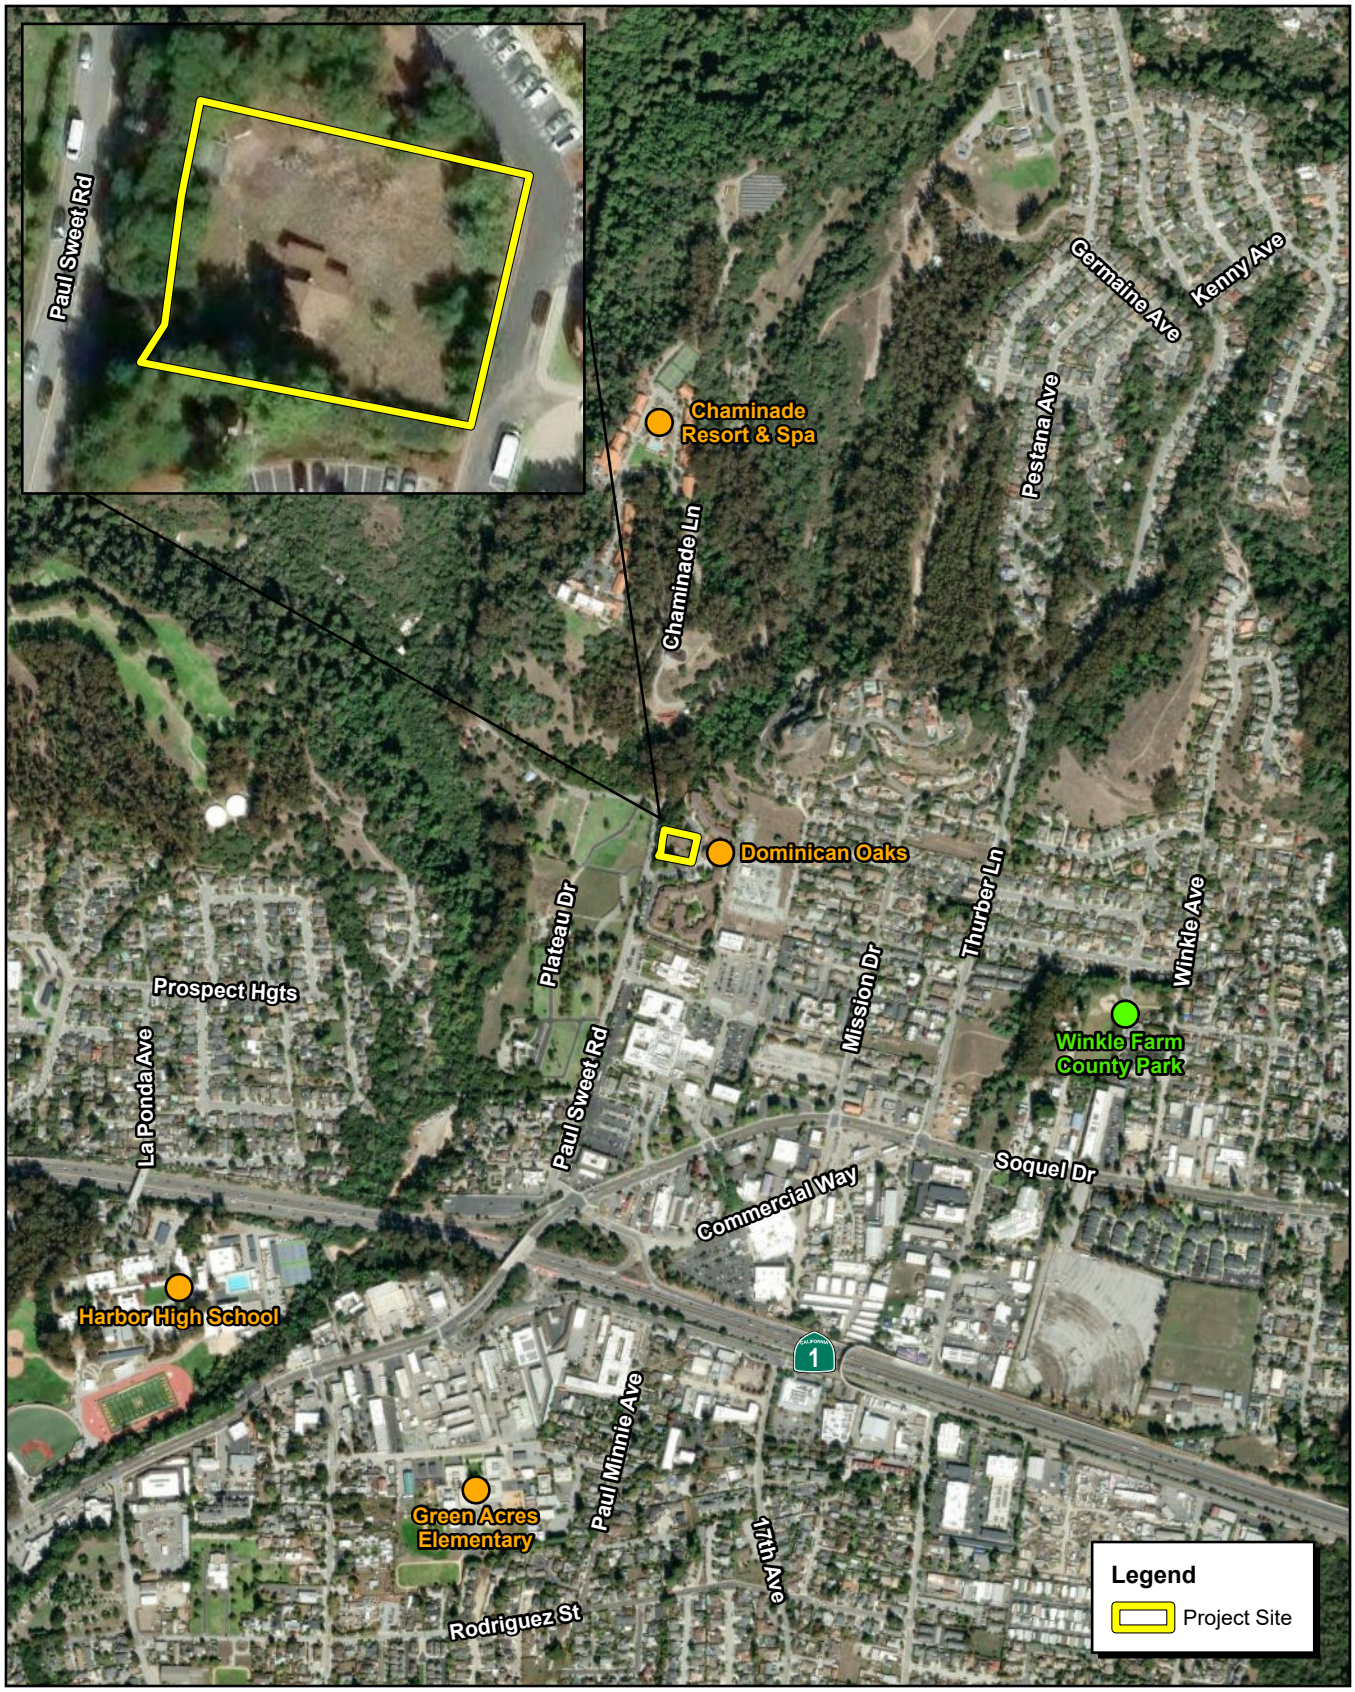

FirstCarbon Solutions (FCS) prepared this memorandum to summarize the findings of the air quality analysis conducted by FCS for the proposed 3500 Paul Sweet Road Residential Project (proposed project) in unincorporated Santa Cruz County, California. All technical data, including modeling assumptions and outputs, are included as Attachment A.

PROJECT DESCRIPTION

The proposed project is the development of a 105-unit residential tower on an approximately 0.58-acre parcel located at 3500 Paul Sweet Road (Assessor's Parcel Number [APN] 025-013-37) in unincorporated Santa Cruz County, California. The site is situated immediately adjacent to an assisted living community to the east and south (Dominican Oaks), with additional medical and healthcare facilities located nearby, including Dominican Hospital. The parcel is currently developed with an existing structure and paved/landscaped areas, as shown in the Local Vicinity Map (Exhibit 1). Access to the site would be provided from Paul Sweet Road.

AIR QUALITY IN SANTA CRUZ COUNTY

The project site is located in unincorporated Santa Cruz County within the North Central Coast Air Basin and is regulated by the Monterey Bay Air Resources District (MBARD). The region is influenced by coastal meteorology, with prevailing onshore winds that generally promote pollutant dispersion, cooler summer temperatures, and mild, wet winters. Periods of air stagnation can occur during high-pressure systems, particularly in fall and winter, allowing pollutants to accumulate under temperature inversions.

Source: ESRI World Imagery. Santa Cruz County.

1,000 500 0 1,000
Feet

Exhibit 1
Local Vicinity Map

The United States Environmental Protection Agency (EPA) and California Air Resources Board (ARB) establish ambient air quality standards for criteria pollutants, which are a group of six air pollutants regulated under the Clean Air Act because of their widespread occurrence and well-documented effects on public health and welfare; these pollutants include ozone (and ozone precursors including reactive organic gases and oxides of nitrogen), carbon monoxide (CO), nitrogen dioxide, sulfur dioxide, particulate matter (PM_{10} and $PM_{2.5}$) and lead. Toxic air contaminants (TACs) are a separate class of air pollutants that are known or suspected of causing cancer or other serious health effects, such as respiratory or neurological damage, even at relatively low concentrations. One of the most significant TACs in California is diesel particulate matter (DPM), a component of diesel exhaust emitted from heavy-duty trucks, buses, construction equipment, locomotives, and ships. DPM consists of fine particles that can penetrate deep into the lungs and has been identified by the State as a TAC and a known human carcinogen. In addition, fine particulate matter ($PM_{2.5}$) is of particular public health concern and has been associated with increased risks of cardiovascular and respiratory disease, asthma exacerbation, and premature mortality, particularly among sensitive populations such as children, the elderly, and individuals with preexisting heart or lung conditions.

MBARD is responsible for implementing and enforcing air quality regulations, issuing permits, monitoring ambient conditions, responding to complaints, and coordinating regional efforts to maintain and improve air quality throughout the jurisdiction including in Santa Cruz County. The North Central Coast Air Basin is designated as nonattainment for the State ozone and PM_{10} standards; the region attains all other State and federal ambient air quality standards.

AIR QUALITY ANALYSIS

The proposed project would result in criteria air pollutant and TAC and/or $PM_{2.5}$ emissions during construction that could have the potential to impact local and regional air quality and/or pose health impacts to surrounding sensitive receptors. Criteria air pollutant and TAC emissions and impacts were evaluated and a description of the evaluation—and the results—are discussed separately below.

Criteria Air Pollutant Emissions and Impacts

Construction activities from the proposed project could result in, or contribute to, an increase in the ambient concentrations of criteria pollutants to levels that exceed the National Ambient Air Quality Standards (NAAQS) and/or California Ambient Air Quality Standards (CAAQS) in the Air Basin. MBARD provides guidance on evaluating criteria air pollutant emissions impacts from individual projects and determining whether the emissions would have a significant air quality effect. To evaluate impacts, MBARD established air quality thresholds of significance. Thresholds of significance are used to determine the significance of a project's environmental effects. Per California Environmental Quality Act (CEQA) Guidelines Section 15064.7, a threshold is an identifiable quantitative, qualitative or performance level of particular environmental effect, non-compliance with which means the effect will normally be

determined to be significant and compliance with normally means the effect will be determined to be less than significant.[1]

According to MBARD, a proposed project will not have a significant air quality effect on the environment, if construction of the project will emit (from all sources, including exhaust and fugitive dust) less than;

- 137 pounds per day of oxides of nitrogen (NO_X)
- 137 pounds per day of reactive organic gases (ROG)
- 82 pounds per day of PM_{10}
- 55 pounds per day of $PM_{2.5}$
- 550 pounds per day of CO

Construction emissions from the proposed project would be “short-term” or temporary in nature and duration. Construction of the proposed project would result in the temporary generation of NO_X, ROG, PM_{10}, $PM_{2.5}$ and CO emissions from construction activities including demolition, site preparation, grading, building construction, architectural coating, and asphalt paving.

Construction emissions were quantified and estimated using California Emissions Estimator Model (CalEEMod) Version 2022.1 (as recommended by MBARD) for a typical construction scenario for a residential project of this size. CalEEMod is a Statewide, computer-based emissions modeling tool developed to estimate construction-related criteria pollutant emissions from land use projects using industry-standard methodologies and default assumptions developed collaboratively by California air districts and regulatory agencies.

The following project characteristics and assumptions were utilized in the analysis:

- An approximate 19-month construction schedule including demolition, site preparation/excavation/grading, building construction, paving and architectural coating.
- Demolition of existing structures resulting in the removal of 69 tons of demolition debris.
- 10,745 cubic yards of soil exported during grading.
- Construction of a 105 residential unit building totaling approximately 92,000 square feet (including the enclosed parking structure) on 0.58 acre.
- Based on CalEEMod default assumptions for a residential project of similar size it is assumed that the construction duration would be approximately 6 months.

Additional details on the assumptions and inputs are included in the CalEEMod output reports (Attachment A).

Construction emissions were estimated as described above and are compared with the thresholds of significance established by MBARD. Table 1 shows the proposed project’s maximum daily construction

[1] Monterey Bay Air Resources District (MBARD). 2016. Guidelines for Implementing the California Environmental Quality Act. February.

emissions. As shown, construction emissions would not exceed MBARD's recommended thresholds of significance for any pollutants.

Table 1: Daily Criteria Pollutant Emissions During Construction

Construction Year	NOx	ROG	PM_{10}	$PM_{2.5}$	CO
2026	14.86	1.14	6.68	3.23	12.35
2027	5.36	79.26	0.81	0.31	10.71
Significance Threshold (lbs/day)	**137**	**137**	**82**	**55**	**550**
Exceeds Significance Threshold?	**No**	**No**	**No**	**No**	**No**

Notes:
lbs = pounds
NO_X = oxides of nitrogen
PM_{10} = particulate matter less than 10 microns in diameter
$PM_{2.5}$ = particulate matter less than 2.5 microns in diameter
ROG = reactive organic gases

Construction emissions taken from the season (summer or winter) with the highest outputs.
Source: California Emissions Estimator Model (CalEEMod) Output (Attachment A).

Toxic Air Contaminant and $PM_{2.5}$ Emissions and Impacts

Construction emissions from the proposed project would have the potential to result in health risk impacts to nearby sensitive receptors due to TAC and/or $PM_{2.5}$ emissions from construction equipment and activities. Sensitive receptors are people who are particularly vulnerable to air pollution, including individuals who may be ill, elderly, or whose lungs are not fully developed (such as infants and young children); sensitive receptors are typically associated with land uses where such populations reside or congregate, including residences, schools, daycare centers, hospitals, and long-term care facilities.

The nearest sensitive receptor(s) to the proposed project is the Dominican Oaks retirement facility, which is located directly to the east, northeast, and south of the project site boundaries. Single-family residences are present further to the east of the Dominican Oaks facility. In addition, worker receptors at the Dominican Hospital are located approximately 650 feet to the south of the project site.

A Health Risk Assessment (HRA) was conducted to quantify and evaluate potential health risks to nearby sensitive receptors from the proposed project's construction-related TAC emissions, consistent with MBARD guidance for emissions estimation and Office of Environmental Health Hazard Assessment (OEHHA) risk assessment methodology. Health risks were assessed using a standard three-step HRA framework: (1) emissions quantification (CalEEMod), (2) air dispersion modeling to estimate DPM concentrations at all receptor locations within 1,000 feet of the project site, and (3) risk calculation in Hotspots Analysis and Reporting Program (HARP2) which implements OEHHA's risk assessment algorithms and health values (including cancer potency and non-cancer reference levels).

As stated above, MBARD recommends use of CalEEMod to quantify project emissions; therefore, CalEEMod was used to estimate diesel exhaust and $PM_{2.5}$ emissions from off-road construction equipment and on-road construction vehicle activity, including vendor and haul trucks traveling on roadways within 1,000 feet of the project site (Attachment A). The principal TAC evaluated was DPM, a component of diesel exhaust emitted by diesel-powered equipment and vehicles. For purposes of the HRA, exhaust PM_{10} emissions were used as a surrogate for DPM. $PM_{2.5}$ emissions were estimated as well.

The American Meteorological Society/EPA Regulatory Model (AERMOD) air dispersion model was used to estimate the concentrations from PM_{10} and $PM_{2.5}$ exhaust emissions at nearby sensitive receptors from on-site construction equipment emissions and haul-road emissions from diesel truck travel.

HARP2 presents the estimated cancer risk at nearby sensitive receptors which is an estimate of the incremental lifetime (or specified exposure period) probability of developing cancer attributable to inhalation exposure of the modeled TAC concentrations, calculated using OEHHA's methodology (implemented through HARP2).

To evaluate TAC health risk impacts, MBARD established air quality thresholds of significance (as discussed above). According to MBARD, in accordance with MBARD Rules 1000 and 1003, the following thresholds are used to evaluate human health impacts, and a project would have a significant impact if:

- The hazard index is greater than 1 for acute or chronic impacts.
- The cancer risk is greater than 10 in one million.

Table 2 presents a summary of the proposed project's construction-related cancer risk, $PM_{2.5}$ concentrations, and chronic non-cancer hazard impacts at the Maximally Exposed Individual (MEI). The MEI is the receptor location that would experience the highest health effects from project construction (as determined by the HRA). The MEI is located at the Dominican Oaks facility directly east of the project site. As shown in Table 2, estimated cancer risks related to project construction would exceed the significance thresholds recommended by MBARD.

In addition, although MBARD has not adopted quantitative significance thresholds for localized $PM_{2.5}$ concentrations, $PM_{2.5}$ impacts were evaluated as part of this analysis using the Bay Area Air District's $PM_{2.5}$ significance thresholds as health-based screening criteria. The Bay Area Air District's $PM_{2.5}$ thresholds are derived from epidemiological studies and are consistent with guidance from OEHHA; the Bay Area Air District evaluates long-term exposure to $PM_{2.5}$ emissions using concentration-based thresholds rather than cancer potency factors. Use of the Bay Area Air District thresholds in this context provides a conservative and health-protective framework for assessing potential $PM_{2.5}$ exposure impacts in the absence of a MBARD-specific threshold and is intended to inform decision-makers.

Table 2: Estimated Health Risks and $PM_{2.5}$ Concentrations During Construction

	Cancer Risk (risk per million)	$PM_{2.5}$ Concentrations	Chronic Non-Cancer Hazard Index
MEI (Dominican Oaks)	24.4	0.38	0.02
Thresholds of Significance	**10**	**0.3**	**1**
Exceeds Threshold?	**Yes**	**Yes**	**No**

Notes:
$\mu g/m^3$ = micrograms per cubic meter
MEI = Maximally Exposed Individual
Risk was evaluated for Diesel Exhaust Particulate Matter which does not have an established Acute Reference Exposure Level Emissions.
Source: Attachment A.

As shown in Table 2, health-based thresholds would be exceeded for cancer risk and $PM_{2.5}$ concentrations as a result of the project's construction-related emissions. To reduce emissions – and associated health risks – it is recommended that the project utilize Tier 4 Final emissions standards on all equipment exceeding 25 horsepower (hp). Tier 4 emissions standards reduce emissions from off-road diesel engines by approximately 90 percent compared to pre-Tier 4 engines.

Conclusion

Based on the analysis, the proposed project would exceed the health risk thresholds established by MBARD and the Bay Area Air District during construction. Recommended measures to reduce emissions, and associated health risks, are noted above.

Thank you for the opportunity to conduct this analysis. Please feel free to contact Phil Ault (559.930.6191 or pault@fcs-intl.com) or Jackie Winkel (920.470.9650 or jwinkel@fcs-intl.com) should you have any questions.

Sincerely,

Philip Ault, Director of Noise and Air Quality

Construction - Demolition

Description	Area (sq ft)	height/depth (ft)	Volume (ft^3)	Demolition Waste Fraction	Demolition Volume (ft^3)	Demolition Waste Density (tons/cy)	Demolition Weight (tons)
Buildings	1,193	10	11,930	0.25	2,983	0.50	55
Pavement	190	1	190	1	190	2.025	14
						Totals	**69**

Notes:

1. Assumptions: Building demolition estimates are based on methods used in CalEEMod (CAPCOA, 2022), based on 1 story building , assume 10 ft per floor where 1 square ft floor area = 10 cubic ft (ft^3) of building volume, and 1 ft^3 of building volume = 0.25 ft^3 of waste. This approach can be used to estimate demolition for multiple story buildings. It also assumes 1 cubic yard (cy) building waste = 0.5 ton weight

2. Assumptions: 1 cubic yard of asphalt = 2.025 tons or 4050 lbs.

3. Source: ICF in collaboration with Sacramento Metropolitan Air Quality Management District, Fehr & Peers, STI and Ramboll. 2022. CalEEMod Appendix C Emission Calculation Details for CalEEMod. April.

Wind Speed

☐ Wind Speeds are Vector Mean (Not Scalar Means)

Wind Direction

Rotation Adjustment [deg]:

Potential Temperature Profile

Base Elevation above MSL (for Primary Met Tower): 48.80 [m]

Meteorological Station Data

Stations	Station No.	Year	X Coordinate [m]	Y Coordinate [m]	Station Name
Surface		2015			OAKLAND/WSO AP
Upper Air		2015			

Data Period

Data Period to Process

Start Date: 1/1/2015 Start Hour: 1 End Date: 12/31/2019 End Hour: 24

Wind Speed Categories

Stability Category	Wind Speed [m/s]	Stability Category	Wind Speed [m/s]
A	1.54	D	8.23
B	3.09	E	10.8
C	5.14	F	No Upper Bound

FCS
An ADEC Innovation

Memorandum

Date: March 23, 2026

Subject: Noise Impacts Analysis for the Proposed 3500 Paul Sweet Road Development, APN 025-013-37, Application No. 241360, 3500 Paul Sweet Road, Santa Cruz County, California

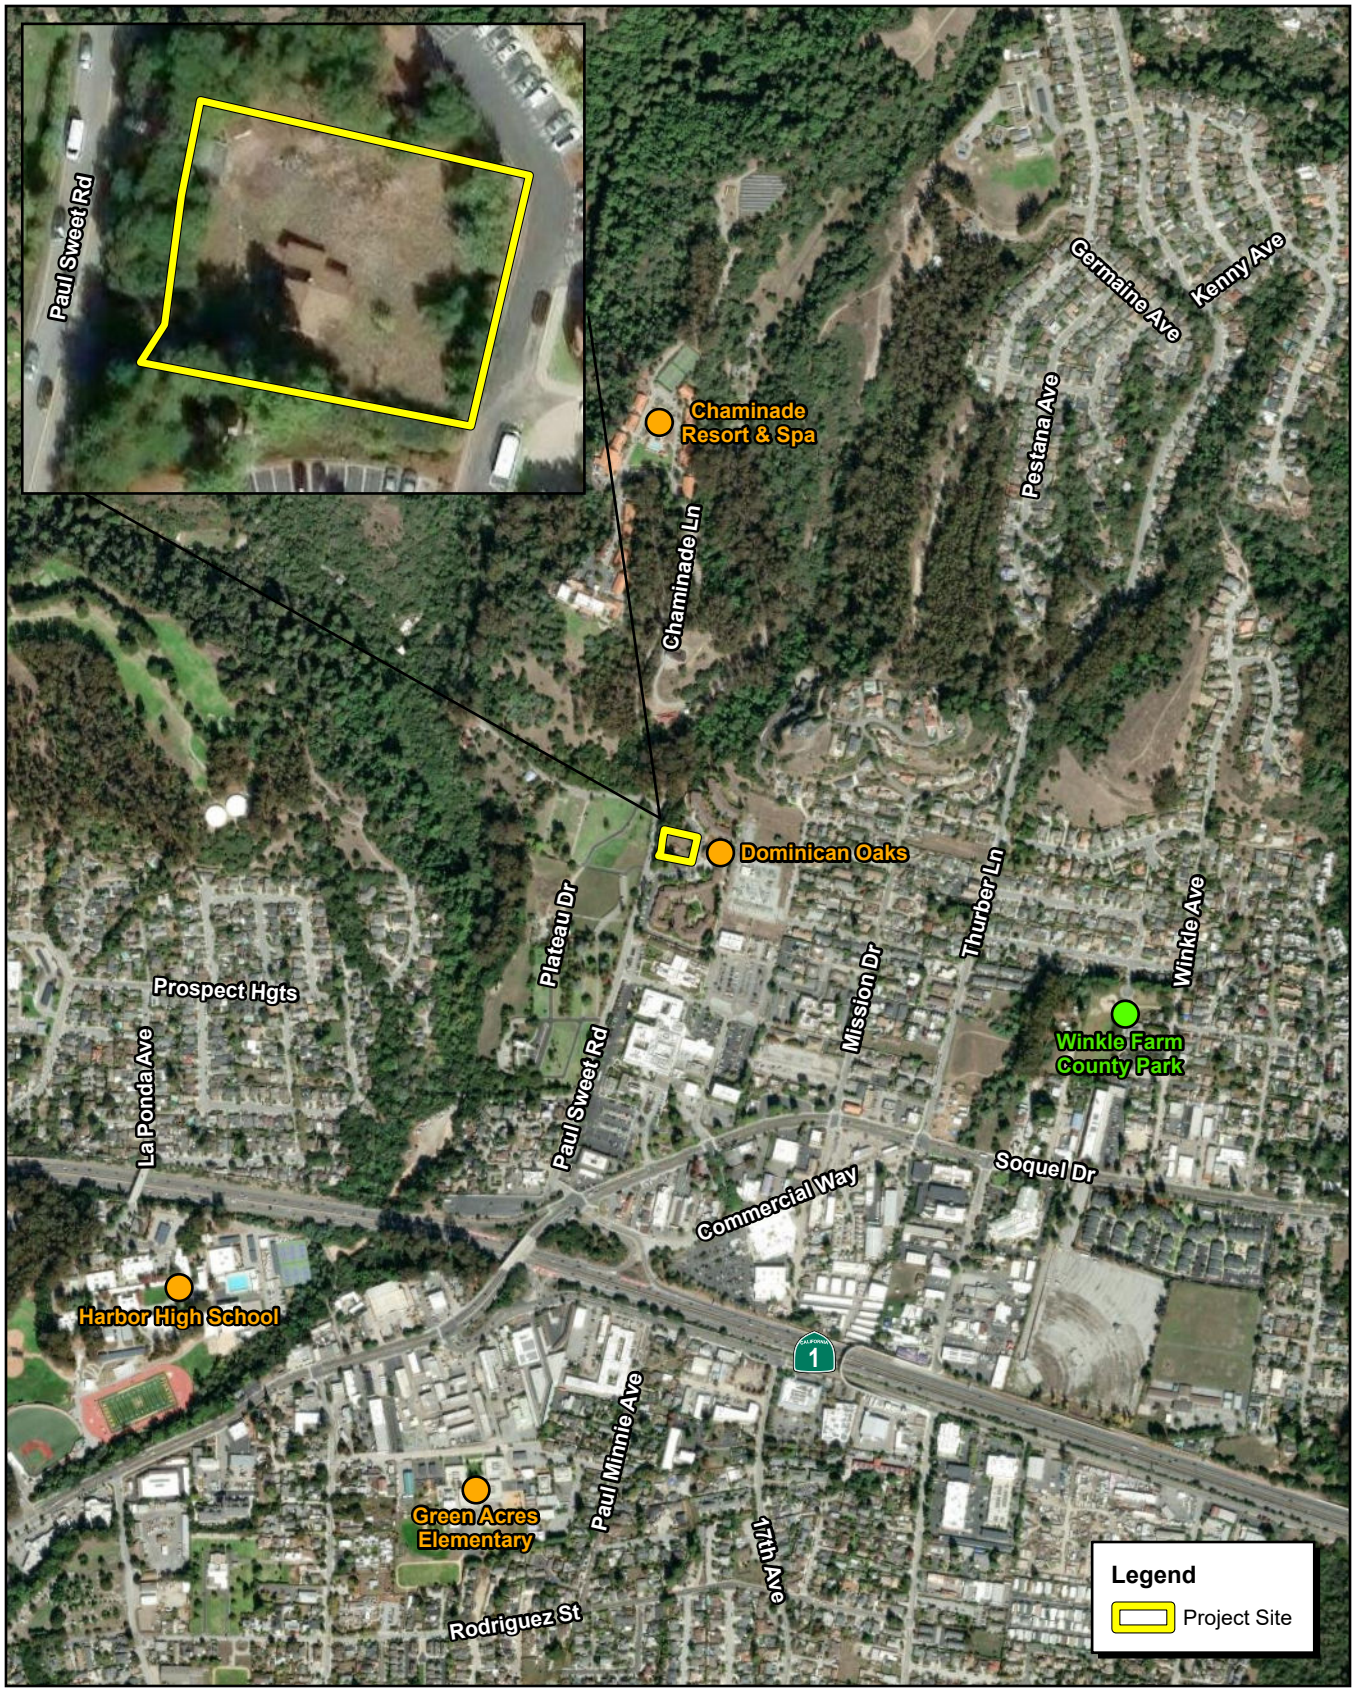

FirstCarbon Solutions (FCS) prepared this memorandum to summarize the findings of the noise analysis conducted by FCS for the proposed 3500 Paul Sweet Road Residential Project (proposed project) in unincorporated Santa Cruz County, California. A summary of the fundamentals of noise and vibration is provided as Attachment A. All technical data, including modeling outputs, are included as Attachment B.

Project Description

The proposed project is the development of a 105-unit residential tower on an approximately 0.58-acre parcel located at 3500 Paul Sweet Road (Assessor's Parcel Number [APN] 025-013-37) in unincorporated Santa Cruz County, California. The site is situated immediately adjacent to an assisted living community (Dominican Oaks) to the east and south (as near as 50 feet to the east of the project site), with additional medical and healthcare facilities located nearby including the Dominican Hospital. The parcel is currently developed with an existing structure and paved/landscaped areas, as shown in the Local Vicinity Map (Exhibit 1).

The following analysis includes an evaluation of potential construction-related noise and vibration impacts —including short-term noise increases associated with demolition, heavy-duty equipment operation, and general building construction—on the nearby sensitive receptors noted above,

Project-generated noise levels are compared to applicable thresholds and policies from the Santa Cruz County General Plan and other relevant local or State guidance.

Exhibit 1
Local Vicinity Map

Setting and Regulatory Framework

Federal Regulations

Currently, no federal noise standards directly regulate environmental noise associated with temporary construction activities development projects.

Federal Transit Administration

Though not regulatory in nature, vibration impact criteria for buildings and other structures have been established by the Federal Transit Authority (FTA), as building and structural damages are generally the foremost concern when evaluating the impacts of construction-related vibrations. For the evaluation of the proposed project's construction-related vibration impacts, the following FTA vibration impact criteria, shown in Table 1, are used given the absence of applicable federal, State, and City standards specific to temporary construction activities and their potential to result in building and structural damages.[1]

Table 1: Federal Transit Administration Construction Vibration Impact Criteria

Building Category	PPV (in/sec)
I. Reinforced Concrete, Steel, or Timber (no plaster)	0.5
II. Engineered Concrete and Masonry (no plaster)	0.3
III. Nonengineered Timber and Masonry Buildings	0.2
IV. Buildings Extremely Susceptible to Vibration Damage	0.12

Notes:
PPV = peak particle velocity
VdB = vibration measured as root mean square (rms) velocity in decibels of 1 microinch per second
Source: Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. September.

The FTA has also established criteria for the assessment of construction noise impacts. The FTA's day and nighttime criteria are shown in Table 2. According to the FTA, exceedances of these criteria may result in adverse community reaction.

Table 2: Federal Transit Administration Construction Noise Impact Criteria

Land Use	$L_{eq\ equipment\ (8hr)}$	
	Day	Night
Residential	80	70
Commercial	85	85
Industrial	90	90

[1] Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual.

Land Use	$L_{eq\ equipment\ (8hr)}$	
	Day	Night
Notes: $L_{eq\ equipment\ (8hr)}$ = equipment noise level in L_{eq} over an 8-hour time period. The analysis assumes that the L_{eq} over this time period would be approximately equal to the L_{eq} over a single construction workday, from start to finish of that day's activities. Source: Federal Transit Administration (FTA). 2018. Transit Noise and Vibration Impact Assessment Manual. Detailed Analysis Construction Noise Criteria. September.		

State Regulations

Assembly Bill 1307

Assembly Bill (AB) 1307 went into effect January 1, 2024. This bill clarifies that "for residential projects, the effects of noise generated by project occupants and their guests on human beings is not a significant effect on the environment." Therefore, this analysis does not address potential noise impacts from future occupants and their guests on sensitive receptors in the project vicinity.

Local Regulations

The project site is located in unincorporated Santa Cruz County. Noise is regulated under County Code Title 13 (Land Use), Chapter 13.15 – Noise Planning. The primary enforceable provisions include Section 13.15.040 (General Noise Regulations and Unlawful Noise), which establishes limits on noise generation and identifies when noise is considered unlawful, including construction-related noise. In addition, County Code Chapter 8.30 – Noise addresses offensive noise and provides objective criteria based on time of day and sound levels (e.g., daytime and nighttime decibel thresholds measured at the property line), which may also apply to construction activities.[2] Noise policy and land use compatibility are also addressed in the County of Santa Cruz General Plan, Chapter 9 (Noise Element), which provides guidance for evaluating noise impacts from new development and construction activities.[3]

County of Santa Cruz 2024 General Plan

The General Plan provides goals, objectives and policies to guide compatible land uses and the incorporation of noise attenuation measures for new uses to protect people living and working in the County from an excessive noise environment. The County's applicable policies include:

GOAL N-1 **Noise Compatibility.** Minimize noise impacts on human activity to ensure the health and safety of the community.

Objective 9.1 **Noise Exposure of New Development and Activities.** Promote land use compatibility by addressing noise exposure that new development and activities will be exposed to arising from existing and anticipated future noise sources.

[2] County of Santa Cruz. Municipal Code.

[3] County of Santa Cruz. 2024. County of Santa Cruz 2024 General Plan. Adopted 2024.

Policy 9.1.2 Where noise sensitive developments would be exposed to noise levels that exceed those considered "normally acceptable," require the incorporation of noise reduction design elements as recommended by a site-specific acoustical study or using prescriptive or performance methods to reduce interior noise levels to the standards set forth in Title 24 of the California Code of Regulations for both residential and non-residential uses.

Policy 9.1.4 Use the Federal Transit Administration and Federal Railroad Administration guidelines, where appropriate, to limit the extent of exposure that new sensitive uses may have to ground-borne vibration from trains.

Objective 9.2 **Noise Exposure of Existing Sensitive Uses and Receptors.** Minimize exposure of existing noise-sensitive land uses and receptors to excessive, unsafe, or disruptive noise that may be generated by new land uses and development projects.

Policy 9.2.1 Require acoustical studies for all new development projects that may affect the existing noise environment affecting sensitive land uses and receptors and that may not conform to the Normally Acceptable Noise Exposure in Table 9-2 of the General Plan.

Policy 9.2.5 The following noise mitigation strategies are preferable to construction of conventional masonry noise barriers where these strategies are a feasible option to reduce impacts on sensitive uses:

- Avoid placement of noise sensitive uses in noisy areas.
- Avoid placement of significant noise generators in noise sensitive areas.
- Increase setbacks between noise generators and noise sensitive uses.
- Orient buildings such that the noise sensitive portions of a project (e.g. bedrooms) are shielded from noise sources (such as through careful design of floor plan).
- Use sound-attenuating architectural design and building features.
- Employ technologies that reduce noise generation, such as alternate pavement materials on roadways, when appropriate.
- Employ traffic calming measures where appropriate.

Policy 9.2.6 Require mitigation and/or best management practices to reduce construction noise as a condition of project approvals, particularly if noise levels would exceed 75 dB at neighboring sensitive land uses or if construction would occur for more than 7 days.

County of Santa Cruz Municipal Code

The Municipal Code Noise Ordinances that are applicable to the proposed project include:

8.30.010 Offensive Noise.

(A) No person shall make, cause, suffer, or permit to be made any offensive noise.

(B) "Offensive noise" means any noise which is loud, boisterous, irritating, penetrating, or unusual, or that is unreasonably distracting in any other manner such that it is likely to disturb people of ordinary sensitivities in the vicinity of such noise, and includes, but is not limited to, noise made by an individual alone or by a group of people engaged in any business, activity, meeting,

gathering, game, dance, or amusement, or by any appliance, contrivance, device, tool, structure, construction, vehicle, ride, machine, implement, or instrument.

(C) The following factors shall be considered when determining whether a violation of the provisions of this section exists:

(1) Loudness (Intensity) of the Sound.

(a) Day and Evening Hours. For purposes of this factor, a noise shall be automatically considered offensive if it occurs between the hours of 8:00 a.m. and 10:00 p.m. and it is:

(i) Clearly discernible at a distance of 150 feet from the property line of the property from which it is broadcast; or

(ii) In excess of 75 decibels at the edge of the property line of the property from which the sound is broadcast, as registered on a sound measuring instrument meeting the American National Standard Institute's Standard S1.4-1971 (or more recent revision thereof) for Type 1 or Type 2 sound level meters, or an instrument which provides equivalent data.

A noise not reaching this intensity of volume may still be found to be offensive depending on consideration of the other factors outlined below.

(b) Night Hours. For purposes of this factor, a noise shall be automatically considered offensive if it occurs between the hours of 10:00 p.m. and 8:00 a.m. and it is:

(i) Made within 100 feet of any building or place regularly used for sleeping purposes; or

(ii) Clearly discernible at a distance of 100 feet from the property line of the property from which it is broadcast; or

(iii) In excess of 60 decibels at the edge of the property line of the property from which the sound is broadcast, as registered on a sound measuring instrument meeting the American National Standard Institute's Standard S1.4-1971 (or more recent revision thereof) for Type 1 or Type 2 sound level meters, or an instrument which provides equivalent data.

A noise not reaching this intensity of volume may still be found to be offensive depending on consideration of the other factors outlined below.

(2) Pitch (frequency) of the sound, e.g., very low bass or high screech;

(3) Duration of the sound;

(4) Time of day or night;

(5) Necessity of the noise, e.g., garbage collecting, street repair, permitted construction activities;

(6) The level of customary background noise, e.g., residential neighborhood, commercial zoning district, etc.; and

(7) The proximity to any building regularly used for sleeping purposes.

(D) Prior to issuing a citation for this section, the responsible person or persons will be warned by a law enforcement officer or other designated official that the noise at issue is offensive and constitutes a violation of this chapter. A citation may be issued if, after receiving the warning, the responsible person(s) continues to make or resumes making the same or similar offensive noise(s) within three months of the warning. Notwithstanding the provisions of subsection (C)(1)

of this section, enforcement of violations under this chapter shall not require the use of a sound level meter.

(1) For purposes of this section “responsible person or persons” means a person or persons with a right of possession in the property from which the offensive noise is emanating, including, but not limited to, an owner or a tenant of the property if the offensive noise is coming from private property, or a permittee if the offensive noise is coming from a permitted gathering on public property, or any person accepting responsibility for such offensive noise. “Responsible person or persons” shall additionally include the landlord of another responsible party and the parents and/or legal guardians of a responsible person under the age of 18 years.

8.30.020 Subsequent offense within 48 hours.

Any person who violates any section of this chapter and is cited for such a violation, and who within 48 hours after receiving such a citation again violates the same section, is guilty of a misdemeanor. A person is cited for a violation when they are issued and sign an infraction or misdemeanor citation, or when they are arrested and booked, or when a complaint is filed and the person is notified of the filing of such a complaint.

8.30.030 Exceptions.

(A) The provisions of this chapter shall not apply to any noise from any specific type of activity for which special noise regulations are provided by any other provision of the County Code.

(B) The provisions of this chapter shall not apply to any noise caused by farming operations carried out on any land designated within the Santa Cruz County General Plan for commercial agricultural use.

13.15.040 Exemptions.

(A) Noise sources normally and reasonably associated with construction, repair, remodeling, or grading of any real property, provided a permit has been obtained from the County as required, and provided said activities take place between the hours of 8:00 a.m. and 5:00 p.m. on weekdays unless the Building Official has in advance authorized said activities to start at 7:00 a.m. and/or continue no later than 7:00 p.m. Such activities shall not take place on Saturdays unless the Building Official has in advance authorized said activities, and provided said activities take place between 9:00 a.m. and 5:00 p.m. and no more than three Saturdays per month. Such activities shall not take place on Sunday or a federal holiday unless the Building Official has in advance authorized such work on a Sunday or federal holiday, or during earlier morning or later evening hours of a weekday or Saturday.

13.15.050 General noise regulations and unlawful noise.

(A) No use, except a temporary construction operation, shall be permitted which creates noise which is found by the Planning Commission not to conform to the noise parameters established by Table 9-2 and Table 9-3 of the Santa Cruz County General Plan beyond the boundaries of the project site at standard atmospheric pressure.

Substantial Noise Increase in Excess of Standards from Construction

For purposes of this analysis, a significant impact would occur if construction activities would result in a substantial temporary increase in ambient noise levels in excess of the County's applicable noise standards. The proposed project would be required to comply with Section 8.30.010 and Section 13.15.040 of the Municipal Code. According to Section 13.15.040, noise sources normally associated with construction are permitted provided they occur between 8:00 a.m. and 5:00 p.m. on weekdays, unless the Building Official authorizes an earlier start time of 7:00 a.m. or an extension to 7:00 p.m. Construction is not permitted on Saturdays unless specifically authorized in advance by the Building Official, and in such cases may only occur between 9:00 a.m. and 5:00 p.m. and for no more than three Saturdays per month. Construction activities are prohibited on Sundays and federal holidays unless advance authorization is granted.

As noted above, the County's General Plan Policy 9.2.6 requires mitigation or best management practices to reduce construction as a condition of project approvals, particularly if noise levels would exceed 75 dB at neighboring sensitive land uses or if construction would occur for more than 7 days. This analysis uses the two criteria listed in General Plan Policy 9.2.6 to identify the potential for impacts due to substantial temporary construction noise. Therefore, a significant construction noise impact would occur if construction takes place for more than 7 days or construction noise exceeds an average daily noise levels of 75 dBA $L_{eq(8\text{-}hour)}$ as measured at the nearest receiving residential land use.

On-site Construction Noise Impact

Construction is completed in discrete steps, each of which has its own mix of equipment and, consequently, its own noise characteristics. These various sequential phases would change the character of the noise generated on the site and, therefore, the noise levels surrounding the site as construction progresses. Despite the variety in the type and size of construction equipment, similarities in the dominant noise sources and patterns of equipment operation allow construction-related noise ranges to be categorized by work phase. Typical operating cycles for these types of construction equipment may involve 1 or 2 minutes of full-power operation followed by 3 or 4 minutes at lower power settings.

The loudest phase(s) of construction are typically the site preparation and grading phases because that is when the loudest pieces of heavy construction equipment would operate. For example, the maximum noise level generated by each grader is assumed to be 85 dBA maximum noise/sound level (L_{max}) at 50 feet from this equipment. Each front-end loader would also generate 80 dBA L_{max} at 50 feet. The maximum noise level generated by each backhoe is approximately 80 dBA L_{max} at 50 feet.

Construction of the proposed project is expected to require the use of a variety of equipment, including graders, dozers, front-end loaders and backhoes, the loudest of which generate maximum reference noise levels of 85 dBA L_{max} at 50 feet. A conservative but reasonable assumption is that this equipment would operate simultaneously and continuously over at least a 1-hour period in the vicinity of the closest existing sensitive receptors but would move linearly over the project site as they perform their earthmoving operations, spending a relatively short amount of time adjacent to any one receptor. A characteristic of sound is that each doubling of sound sources with equal strength increases a sound level by 3 dBA. These worst-case construction noise levels would only occur during the grading phase of development.

The closest noise-sensitive receptor to the project site is the Dominican Oaks retirement community located directly east of the site. The façade of this nearest sensitive receptor would be located approximately 50 feet from the nearest construction footprint where multiple pieces of heavy construction equipment could operate simultaneously during construction. At this distance, relative worst-case construction noise levels could momentarily reach up to 82 dBA L_{eq} at 50 feet. However, construction activity would vary over the course of the workday as equipment moves throughout the site and operates intermittently. When these variations are accounted for using an a weighted, time-averaged metric, the reasonably worst-case 8-hour average construction noise level would be 74 dBA Leq (8-hour) at 50 feet, which more accurately represents overall human noise exposure during a typical construction day. While the project is not currently expected to require impact pile driving, if such equipment were used and operated at approximately 50 feet from the nearest structure, reasonable worst-case construction noise levels could reach approximately 86 dBA $L_{eq(8\text{-}hr)}$. The calculation spreadsheet with detailed modeling assumptions is included in Attachment B.

General Plan Policy 9.2.6 does not define a weighting of the 75 decibel construction noise limit. The FTA's construction noise standards are weighted as an average noise level over an 8-hour workday ($L_{eq(8\text{-}hour)}$). Therefore, it is assumed for the purpose of this analysis that the construction noise threshold established by the County is also weighted similarly. The reasonable worst case 8-hour construction noise levels without pile driving would be below the 75 dBA $L_{eq(8\text{-}hr)}$ noise limits established by the County. If pile driving were included, the reasonable worse-case construction noise levels would be above the 75 dBA $L_{eq(8\text{-}hr)}$ noise limits established by the County.

Regardless, General Plan Policy 9.2.6 requires mitigation and/or best management practices to reduce construction noise as a condition of project approvals, particularly if noise levels would exceed 75 dB at neighboring sensitive land uses **or** if construction would occur for more than 7 days. Because the project construction is anticipated to occur for more than seven days, this policy is applicable to the proposed project it should implement mitigation or best management practices to limit construction noise. Mitigation practices could include ensuring that internal combustion engine-driven-equipment is equipped with exhaust mufflers that are in good condition; limiting unnecessary idling of internal combustion engines; and locating stationary noise-generating equipment as far as possible from sensitive receptors, among others.

Excessive Groundborne Vibration Levels from Construction

A significant impact would occur if the proposed project would generate groundborne vibration or groundborne noise levels in excess of established standards. The County has not adopted criteria for groundborne vibration impacts. Therefore, for purposes of this analysis, the FTA's vibration impact criteria are utilized. The FTA has established industry accepted standards for vibration impact criteria and impact assessment. These guidelines are published in its Transit Noise and Vibration Impact Assessment Manual.[4]

Of the variety of equipment used during construction, the small vibratory rollers anticipated to be used in the paving of internal roadways would produce the greatest groundborne vibration levels. Large vibratory

[4] Federal Transit Administration (FTA). *Transit Noise and Vibration Impact Assessment Manual*, FTA Report No. 0123. U.S. Department of Transportation, February 27, 2020. [transit.dot.gov]

rollers produce groundborne vibration levels ranging up to 0.210 in/sec peak particle velocity (PPV) at 25 feet from the operating equipment.

The closest off-site structure is the Dominican Oaks retirement community building located directly east of the project site, approximately 50 feet from the nearest construction footprint where a large vibratory roller could potentially operate. At this distance, groundborne vibration levels could range up to 0.07 in/sec PPV from operation of a large vibratory roller. These reasonable worst-case construction vibration levels are well below the FTA's Construction Vibration Impact Criteria of 0.2 in/sec PPV for the closest structure, a building of nonengineered timber and masonry construction. Therefore, the impact of short-term groundborne vibration associated with construction to off-site receptors would be less than significant at this distance.

While the proposed project is not currently expected to require impact pile driving, if such equipment were used and operated at approximately 50 feet from the nearest structure, reasonable worst-case vibration levels could reach approximately 0.22 in/sec PPV. This level would exceed the FTA's 0.2 in/sec PPV criterion for the nearest structure and could result in a potentially significant vibration impact. If impact pile driving were to occur, the project should implement mitigation measures to ensure vibration does not exceed FTA's vibration impact criteria. Mitigation could include the preparation of a Construction Vibration Plan which limits the distance operating piles drivers and nearest structures and designates a Disturbance Coordinator responsible for responding and investigating claims of excessive vibration.

CONCLUSION

Thank you for the opportunity to conduct this noise impact analysis. Please feel free to contact Phil Ault (559.930.6191 or pault@fcs-intl.com) should you have any questions.

Sincerely,

Philip Ault, Director of Noise and Air Quality

NOISE AND VIBRATION FUNDAMENTALS

Characteristics of Noise and Descriptors

Sound can be described in terms of its loudness (amplitude) and frequency (pitch). Since the range of intensities that the human ear can detect is so large, the scale frequently used to measure intensity is a scale based on multiples of 10, the logarithmic scale. The standard unit of measurement for sound is the decibel, abbreviated dB. Because the human ear is not equally sensitive to sound at all frequencies, the A-weighted scale (dBA) is used to reflect the normal hearing sensitivity range of the human ear. Table 1 provides examples of A-weighted noise levels from common sources.

Although the terms “sound” and “noise” are often used synonymously, noise is commonly defined as sound that is either loud, unpleasant, unexpected, or undesired.[1] Because decibels are logarithmic units, they cannot be simply added or subtracted. For example, two cars each producing 60 dBA of noise would not produce a combined 120 dBA.

Table 1: A-Weighted Decibel Scale

Common Noise Sources	Sound Level, dBA
Near Jet Engine	130
Rock and Roll Band	110
Jet Flyover at 1,000 feet	100
Power Motor	90
Food Blender	80
Living Room Music	70
Human Voice at 3 feet	60
Residential Air Conditioner at 50 feet	50
Bird Calls	40
Quiet Living Room	30
Average Whisper	20
Rustling Leaves	10
Notes: These noise levels are approximations intended for general reference and information use. They do

Common Noise Sources	Sound Level, dBA
not meet the standard required for detailed noise analysis but are provided for the reader to gain a rudimentary concept of various noise levels. Source: Cowan, James P. 1993. Handbook of Environmental Acoustics.	

Table 2 briefly defines common noise measurement descriptors and other sound terminology used in this memorandum.

Table 2: Sound Terminology

Term	Definition
Sound	A vibratory disturbance created by a vibrating object which, when transmitted by pressure waves through a medium such as air, can be detected by a receiving mechanism such as the human ear or a microphone.
Noise	Sound that is loud, unpleasant, unexpected, or otherwise undesirable.
Ambient Noise	The composite of noise from all sources near and far in a given environment.
Decibel (dB)	A unitless measure of sound on a logarithmic scale which represents the squared ratio of sound pressure amplitude to a reference sound pressure. The reference pressure is 20 micropascals, representing the threshold of human hearing (0 dB).
A-Weighted Decibel (dBA)	An overall frequency-weighted sound level that approximates the frequency response of the human ear.
Equivalent Noise Level (L_{eq})	The average sound energy occurring over a specified time period. In effect, L_{eq} is the steady-state sound level that in a stated period would contain the same acoustical energy as the time-varying sound that actually occurs during the same period.
Maximum and Minimum Noise Levels (L_{max} and L_{min})	The maximum or minimum instantaneous sound level measured during a measurement period.
Day-Night Level (DNL or L_{dn})	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 10 dB added to the A-weighted sound levels occurring between 10:00 p.m. and 7:00 a.m. (nighttime).
Community Noise Equivalent Level (CNEL)	The energy average of the A-weighted sound levels occurring during a 24-hour period, with 5 dB added to the A-weighted sound levels occurring between 7:00 p.m. and 10:00 p.m. and 10 dB added to the A- weighted sound levels occurring between 10:00 p.m. and 7:00 a.m.

Term	Definition
Statistical Descriptor (L_X)	L_X is used to represent the noise level exceeded X% of a specified time period. For example, L_{90} represents the noise level that is exceeded 90% of a specified time period. L_{90} is commonly used to represent ambient or background steady-state noise levels.

Effects of Environmental Noise

The degree to which noise can impact an environment ranges from levels that interfere with speech and sleep to levels that can cause adverse health effects. Most human response to noise is subjective.

Factors that influence individual responses may include the intensity, frequency, and pattern of noise; the amount of background or existing noise present; and the nature of work or human activity that is exposed to intruding noise.

According to the National Institute of Health (NIH), extended or repeated exposure to sounds at or above 85 dB can cause hearing loss. Sounds of 75 dBA or less, even after continuous and repeated exposure, are unlikely to cause hearing loss.[2] The World Health Organization (WHO) reports that adults should not be exposed to sudden "impulse" noise events of 140 dB or greater. For children, this limit is 120 dB.[3]

Exposure to elevated nighttime noise levels can disrupt sleep, leading to increased levels of fatigue and decreased work or school performance. For the preservation of healthy sleeping environments, the WHO recommends that continuous interior noise levels should not exceed 30 dBA L_{eq} and that individual noise events of 45 dBA or higher be limited.[4]

Some epidemiological studies have shown a weak association between long-term exposure to noise levels of 65 to 70 dBA L_{eq} or greater and cardiovascular effects, including ischemic heart disease and hypertension. However, at this time, the relationship is largely inconclusive.

It is generally accepted that people with normal hearing sensitivity can barely perceive a 3 dBA change in noise levels, though if changes occur to the character of a sound (i.e., changes to the frequency content), then changes less than 3 dBA may be more noticeable.[5] Changes of 5 dBA may be readily perceptible,

[4] Ibid.

[5] California Department of Transportation (Caltrans). 2013. Technical Noise Supplement to the Traffic Noise Analysis Protocol.

and changes of 10 dBA are perceived as a doubling in loudness.[6] However, few people are highly annoyed by daytime noise levels below 55 dBA.[7]

Loud noises, such as those from construction activities, can interfere with peoples' abilities to effectively communicate via speech, as well as other activities, resulting in annoyance or inconvenience. The EPA has found that a home interior noise level of 45 dBA L_{eq} generally protects speech and communication by providing 100 percent intelligibility of speech sounds.[8] Other common daily activities that may be disrupted by elevated interior noise levels include watching television, listening to music, or activities requiring concentration (such as reading). The EPA has determined that, given the preservation of an indoor noise level associated with 100 percent speech intelligibility (i.e., 45 dBA L_{eq}), the average community reaction is not evident and "7 dBA below levels associated with significant complaints and threats of legal action." Any complaints and annoyance are dependent on "attitude and other non-level related factors."

Noise Attenuation

Generally speaking, noise levels decrease, or "attenuate," as distances from noise sources to receivers increases. For each doubling of distance, noise from stationary or small, localized sources, commonly referred to as "point sources," may attenuate at a rate of 6 dBA for each doubling of distance. This attenuation is referred to as the inverse square law. For example, if a point source emits a noise level of 80 dBA at a reference distance of 50 feet, its noise level would be approximately 74 dBA at a distance of 100 feet, 68 dBA at a distance of 200 feet, etc. Noise emitted by "line" sources, such as highways, attenuates at the rate of 3 dBA for each doubling of distance.[9]

Factors such as ground absorption and atmospheric effects may also affect the propagation of noise. In particular, ground attenuation by non-reflective surfaces, such as soft dirt or grass, may contribute to increased attenuation rates of up to an additional 8-10 dBA per doubling of distance.[10]

Noise is most audible when traveling by direct line of sight, an unobstructed visual path between a noise source and a receiver. Barriers that break the line of sight between noise sources and receivers, such as walls and buildings, can greatly reduce source noise levels by allowing noise to reach receivers by diffraction only. Barriers can reduce source noise levels by up to 20 dBA, though it is generally infeasible for temporary barriers to reduce source noise levels by more than 15 dBA.[11] In cases where the noise

[10] Ibid.

[11] Ibid.

path from source to receiver is direct but grazes the top of a barrier, noise attenuation of up to 5 dBA may still occur.[12]

Recommended Noise Levels to Protect Public Welfare

In 1972, Congress enacted the Noise Control Act. This act authorized the United States Environmental Protection Agency (EPA) to publish descriptive data on the effects of noise and establish levels of sound "requisite to protect the public welfare with an adequate margin of safety." These levels are separated into health (hearing loss levels) and welfare (annoyance levels) categories, as shown in Table 3. The EPA cautions that these identified levels are not standards because they do not take into account the cost or feasibility of the levels.

For protection against hearing loss, 96 percent of the population would be protected if sound levels are less than or equal to an $L_{eq(24)}$ of 70 dBA. The EPA activity and interference guidelines are designed to ensure reliable speech communication at about 5 feet in the outdoor environment. For outdoor and indoor environments, interference with activity and annoyance should not occur if levels are below 55 dBA and 45 dBA, respectively.

Table 3: Summary of EPA Recommended Noise Levels to Protect Public Welfare

Effect	Level	Area
Hearing loss	$L_{eq}(24) \leq 70$ dB	All areas
Outdoor activity interference and annoyance	$L_{dn} \leq 55$ dB	Outdoors in residential areas, farms, and other outdoor areas where people spend widely varying amounts of time and other places in which quiet is a basis for use.
	$L_{eq}(24) \leq 55$ dB	Outdoor areas where people spend limited amounts of time, such as school yards, playgrounds, etc.
Indoor activity interference and annoyance	$L_{eq} \leq 45$ dB	Indoor residential areas.
	$L_{eq}(24) \leq 45$ dB	Other indoor areas with human activities such as schools, etc.

Note:
(24) signifies an L_{eq} duration of 24 hours.

Characteristics of Vibration and Descriptors

Groundborne vibrations consist of rapidly fluctuating motions within the ground that have an average motion of zero. Vibrating objects in contact with the ground radiate vibration waves through various soil and rock strata to the foundations of nearby buildings.

Although groundborne vibration can be felt outdoors, it is typically only an annoyance to people indoors where the associated effects of the shaking of a building can be notable. When assessing annoyance from groundborne vibration, vibration is typically expressed as root mean square (rms) velocity in units of decibels of 1 microinch per second. To distinguish these vibration levels referenced in decibels from noise levels referenced in decibels, the unit is written as “VdB.”

In extreme cases, excessive groundborne vibration has the potential to cause structural damage to buildings. Common sources of groundborne vibration include construction activities such as blasting, pile driving, and operating heavy earthmoving equipment. However, construction vibration impacts on building structures are generally assessed in terms of peak particle velocity (PPV). For the purposes of this analysis, project-related impacts are expressed in terms of PPV. Typical vibration source levels from construction equipment are shown in Table 4.

Table 4: Vibration Levels of Construction Equipment

Construction Equipment	PPV at 25 Feet (inches/second)	rms Velocity in Decibels (VdB) at 25 Feet
Water Trucks	0.001	57
Scraper	0.002	58
Bulldozer (Small)	0.003	58
Jackhammer	0.035	79
Concrete Mixer	0.046	81
Concrete Pump	0.046	81
Paver	0.046	81
Pickup Truck	0.046	81

Backhoe	0.051	82
Crane (Mobile)	0.051	82
Excavator	0.051	82
Grader	0.051	82
Loader	0.051	82

Construction Equipment	PPV at 25 Feet (inches/second)	rms Velocity in Decibels (VdB) at 25 Feet
Loaded Trucks	0.076	86
Bulldozer (Large)	0.089	87
Caisson drilling	0.089	87
Vibratory Roller (Small)	0.101	88
Compactor	0.138	90
Clam shovel drop	0.202	94
Vibratory Roller (Large)	0.210	94
Pile Driver (Impact: typical)	0.644	104
Pile Driver (Impact: upper range)	1.518	112

Notes:
PPV = peak particle velocity
VdB = velocity in decibels
rms = root mean square
Source: Compilation of scientific and academic literature, generated by Federal Transit Administration (FTA) and Federal Highway Administration (FHWA).

As vibration waves propagate from a source, the vibration energy decreases in a logarithmic nature and the vibration levels typically decrease by 6 VdB per doubling of the distance from the vibration source. As stated above, this drop-off rate can vary greatly depending on the soil type, but it has been shown to be effective enough for screening purposes, in order to identify potential vibration impacts that may need to be studied through actual field tests. The vibration level (calculated below as PPV) at a distance from a point source can generally be calculated using the vibration reference equation:

$$PPV = PPV_{ref} * (25/D)^n \text{ (in/sec)}$$

Where:

PPV_{ref} = reference measurement at 25 feet from vibration source
D = distance from equipment to property line
n = vibration attenuation rate through ground

According to Section 7 of the FTA Transit Noise and Vibration Impact Assessment Manual, an “n” value of 1.5 is recommended to calculate vibration propagation through typical soil conditions.[13]

						Lmax[5]	101	Leq	94

Notes:
[1] Percentage of time activity occurs each hour based on FHWA usage factors
[2] Distance assumes one piece of equipment adjacent to project boundary and others at the closest reasonable operating distance away
[3] Soft ground terrain between project site and receptor.
[4] Shielding due to terrain or structures
[5] Calculated Lmax is the loudest value.

Executive Summary for Planning Commissioners: A Life-and-Death Interventional Crisis in Santa Cruz County – The Imperative of Protecting Emergency Access and Sustaining Healthcare Delivery

Commissioners, we are not facing a hypothetical challenge; we are in the midst of a critical healthcare delivery crisis, amplified by current land-use pressures and the precarious state of regional healthcare infrastructure. This document presents irrefutable data demonstrating that emergency medical access from Santa Cruz County is already failing to meet life-saving benchmarks, and any further degradation of our transportation corridors will inevitably lead to preventable deaths and catastrophic outcomes.

The American Heart Association and American Stroke Association unequivocally state that patients experiencing stroke or ST-elevation myocardial infarction (STEMI) achieve optimal survival and functional outcomes when they reach definitive acute care within 30 minutes of the emergency call. Every minute of delay beyond this window translates directly into higher mortality, increased disability, and prolonged hospital stays. In Santa Cruz County, we are consistently failing this most fundamental benchmark.

The Imminent Threat: Watsonville Community Hospital's Instability

Compounding this existing crisis is the profound uncertainty surrounding the long-term operational stability of Watsonville Community Hospital (WCH). Should WCH cease to provide emergency services or significantly reduce its acute care capacity, Dominican Hospital would likely become the sole definitive care provider for the entire county's critical emergencies. This is not a distant possibility; it is a live contingency that would place an unprecedented and unmanageable strain on an already overstretched system, transforming our current transport time issues into an immediate, county-wide public health disaster.

Dominican Hospital: Operating Beyond Sustainable Limits

Dominican Hospital is committed to being an unwavering County partner, dedicated to providing the utmost care for our citizens. However, this commitment requires a true partnership with county officials. We are operating as the linchpin of county emergency care, enduring immense pressure:

- We answered 54,000 emergency visits last year.
- 88% of our total hospital admissions originate from these emergency visits, demonstrating the severe acuity of our patient population.
- Our hospital operates at or over capacity daily, with hold times in our Emergency Department frequently exceeding 8 hours.
- The entire county population depends on our access to care.

Irrefutable Evidence: We Are Already Too Late

February 13, 2026

An analysis of 11 months of local emergency transport time data for stroke and STEMI patients reveals:

- Countywide Averages Shatter Life-Saving Benchmarks:
    - Stroke (Combined Day/Night): 34 minutes 39 seconds (nearly 5 minutes over the 30-minute standard).
    - STEMI (Combined Day/Night): 35 minutes 41 seconds (nearly 6 minutes over the 30-minute standard).
    - These averages mask far more severe individual instances.
- Nighttime:
    - Nighttime response times are consistently and dramatically worse. Across nearly all months, Stroke nighttime transport times frequently exceed 40–45 minutes.
    - STEMI nighttime transport times regularly reach as high as 46 minutes.
    - This is not an academic observation; it is clinically catastrophic. Stroke and cardiac events do not follow business hours, and documented nighttime delays directly correlate with higher mortality and poorer neurological outcomes.
- STEMI Delays: Every Minute Adds Risk:
    - Several months show STEMI transport times exceeding 40–49 minutes, including September (44–46 min), November (nearly 50 min during the day), and August (over 41 min at night).
    - For STEMI patients, every 10-minute delay dramatically increases mortality risk. These consistent, significant delays are nothing short of an active threat to life.

Planning and Land-Use Implications: A Recipe for Disaster, Threatening our Viability

This data paints a stark picture: emergency medical access in Santa Cruz County is already operating beyond nationally recommended limits, pushing patients closer to irreparable harm and death.

Any land-use decision that:

- Increases roadway congestion at and around the healthcare corridor
- Adds residential or commercial density near critical corridors (Soquel Dr., Dominican Way, Paul Sweet Rd.).
- Restricts ambulance circulation, staging, or hospital ingress/egress.

Will predictably, and with absolute certainty, worsen emergency response times for stroke and heart attack patients. This would be catastrophic if Dominican Hospital were to become the sole definitive care facility for the entire county's emergency needs – a scenario that presents unacceptably high risks to public health and safety.

Consider the immediate impact: 105 new apartments will undoubtedly introduce a minimum of 105 new vehicles, potentially escalating to 241.5 if families reside there, onto roads already gridlocked during peak hours. We observe Code 3 (emergency) ambulances struggling, sometimes terrifyingly, to navigate this current congestion day and night. Ambulance companies already rely on staging on Paul Sweet Road, and AMR strategically leases the corner building on Soquel Drive and Paul Sweet solely for rapid staging – a testament to the current traffic challenges.

Approving developments that worsen this situation amounts to creating a receipt for disaster, directly contributing to preventable harm and death in our community.

From a planning perspective, this raises:

- Public health and safety concerns of the highest order, impacting human lives.
- Severe CEQA significance thresholds related to emergency response that cannot be mitigated.
- Fundamental consistency issues with General Plan health and safety elements.

Crucially, when stroke and STEMI mortality rates rise due to delayed care, these are not just medical tragedies; they become deeply concerning business measures for the hospital. How do we continue to operate at the scope and scale required for our community if the very infrastructure around us systematically undermines our ability to deliver viable, life-saving outcomes? This cannot be solely Dominican Hospital's burden; it demands active collaboration from county officials.

Bottom Line for Commissioners: The Choice is Clear – A Partnership for Life

Current emergency transport times already exceed AHA/ASA best-practice standards, meaning stroke and STEMI patients are routinely arriving too late for optimal outcomes. The precarious situation of Watsonville Community Hospital introduces an extreme and unacceptable level of risk; a scenario where Dominican Hospital handles all county emergency response would render current transport times utterly unmanageable and lethal.

Dominican Hospital is resolute in its commitment to provide the highest level of care. However, this paramount mission requires county officials to consider and take decisive action to work *with* and not *hinder* care delivery. Additional traffic or access constraints pose a measurable, foreseeable, and entirely avoidable risk to life safety. This risk will be catastrophically amplified if WCH's emergency services are diminished or lost.

Emergency access must be treated as the absolute limiting factor, not an afterthought, in all future land-use approvals. The lives of Santa Cruz County residents, and the very sustainability of critical healthcare services, depend on this crucial understanding. We urge you to recognize this as a critical partnership opportunity and make land-use decisions that

actively support, rather than undermine, our ability to save lives and maintain the health of our community.

SUBJECT: ANALYSIS OF SEWER IMPACTS FROM A PROPOSED DEVELOPMENT AT 3500 PAUL SWEET ROAD DEVELOPMENT, APN 025-013-37. APPLICATION NO. 241360

DATE: MARCH 6, 2026

Background:

There is a proposed housing development adjacent to the Dominican Oaks retirement village in Soquel, CA. Cornerstone Civil was retained to provide analysis of the proposed development and its potential impacts to the Dominican Oaks property. The scope was limited to site civil related features which include grading, utility connection, storm drainage and erosion control.

Discussion:

The proposed development is a building and various site improvements which cover the majority of the property. Therefore, there is minimal site design elements to discuss.

Storm drainage –
The proposed drainage design of the project is to send all on-site drainage through a treatment system and to the right-of-way of Paul Sweet Road. Because this property sits at a lower elevation than the Dominican Oaks property, it is unlikely that this development will have any significant concern related to storm drainage.

.
Erosion Control-
Similar to the storm drainage section above, because this parcel is downstream of the Dominican Oaks parcel, erosion control during construction is of a minimal concern. The contractor will need to take care not to cause tracking of sediment up Paul Sweet Road during construction. This is however, the generally accepted construction process of urban developments.

Since the proposed development appears to have a 0’ setback, the contractor will need to make extra effort to avoid encroaching on the Dominican Oaks property for foundation excavation and all construction with close proximity to the property line

Utility Connections -
The water service appears to be designed to tap into the main on Paul Sweet Road. The construction and subsequent use of this service should have minimal impact to the Dominican Oaks property.

The proposed sewer connection may have certain concerns for the Dominican Oaks property. According to the County’s GIS, there is a small run of three sewer manholes and sewer main pipe which runs under the drive aisle which flows to the main on Paul Sweet Road. Because these structures and lines show up in the

County's GIS, they are likely maintained by County sanitation workers. This should be verified by the Sanitation District and/or any easement or rights-of-entry noted on the title report. The development proposes to tap into this system right at the property line. The finished construction would send

This sewer connection could pose a potential concern. The current single-family residence provides a very small amount of sewage relatively to this shared system. The proposed development will increase the flow and potential for issue significantly. This shared portion of sewer appears to lie directly under the only drive aisle and ingress/egress for the property. If open trenching maintenance is required of this system, it could potentially block vehicular access to the site.

Other Potential Concerns:

It is standard for water and sewer districts to scrutinize large housing developments for capacity of these utilities. It should be noted that an analysis will likely be required by the County's sanitation district that the sewer main on Paul Sweet Road is analyzed for condition and capacity to ensure that this additional flow will not overwhelm the system.

The water supply and distribution should also be analyzed. It is anticipated that the Santa Cruz City Water Department may require analysis of the water infrastructure in the road as well as the overall impacts to the water supply volume.

Traffic impacts may also be a concern to note; specifically, the impacts to the Soquel Drive and Paul Sweet Road. A trip generation study may be required based on the new expected level of traffic which will utilize this intersection.

Code Reference:

County of Santa Cruz Design Criteria.

The Design Criteria manual **June 2024 edition** states that the Design Criteria are minimum requirements for development in the unincorporated area and apply not only to subdivisions, but also to other development under County Public Works jurisdiction, including **building permits, discretionary permits, encroachment permits, storm drainage improvements, and water and sewer line construction in County Service Areas and Sanitation Districts**.

It also states that the Design Criteria is incorporated by reference into the Santa Cruz County Code, and the improvement plan processing section specifically refers to **Section 14.01.501 et seq.** of the County Code regarding fees, agreements, and construction securities for land divisions.

Stated in Part 4. Sanitary Sewer Design – Section C Design Flow Rates

"Design flow rate shall be the peak flow rate, including infiltration and stormwater inflow, of the total ultimate tributary area."

Stated in Part 4. Sanitary Sewer Design – Section D Design of Sewer Systems

“All sanitary sewer systems shall be designed as looped systems where topographically practical, with bypass connections at all intersecting streets, and shall be capable of serving all properties within the sewage basin, based on projected General Plan densities within the District’s sphere of influence.”

Stated in Part 4. Sanitary Sewer Design – Section E Sewer Easement Requirements (1)

“Easements shall be provided for all District maintained sewers, except in rights-of-way currently maintained by the County.”

County of Santa Cruz Municipal Code.

Chapter 17.02.070 (B). the code states that **new development projects at residential densities greater than one unit per acre shall connect to a public sanitation system having adequate capacity on site**.

If you have any further questions or clarifications, please contact me at (831)346-5446 or ryan@cornerstone-civil.com

Health and Safety Impacts Summary

Note: Dominican Oaks offers 206 residential units with a maximum capacity of 412 residents plus occasional overnight guests. Current occupancy is 212 residents with an average age of 88 years. Approximately 80% of residents require walkers, wheelchairs, or canes for mobility. Many residents are hearing and cognitively impaired, including assisted living and hospice care residents. Forty (40) units, approximately 19% of total units, are expressly set aside as affordable senior living units. Evacuation will be a challenge during any emergency.

Fire Safety

Note: Dominican Oaks experienced 441 calls to 911 during the past year.

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Increased risk of fire spreading to adjacent and neighboring properties	Fire Separation Distance (FSD) distance from the structure to the nearest interior property line	California Building Code, Chapter 2	County or Central Fire District to confirm FSD values for each side of the structure
	Minimum 1-hour fire resistance ratings when the FSD is less than five feet	California Building Code, Table 705.5	Require fire resistance ratings consistent with the confirmed FSD values for coatings or treatment of all exterior walls
	Allowable Openings on Exterior Walls No openings allowed when the FSD is less than three feet openings allowed on up to 15% of wall area when the FSD is between three and five feet no limitations when the FSD is twenty feet or more	California Building Code, Table 705.9	Verify that the maximum allowable opening percentage is consistent with the confirmed FSD values for each side of the structure
	Allowable projections extending off of exterior walls, including balconies No projections allowed when FSD is less than 2 feet projections must be at least 40 inches from property line when the FSD is 5 feet or more	California Building Code, Table 705.2	Verify that the edge of balconies meet the projection criteria as a function of the FSD values confirmed by the Fire District
Inadequate fire protection for proposed development and increased risk of fire spreading to adjacent and neighboring properties	150-foot Hose Pull (Sheet AP0.52 of Applicant's submittal) North, South, and East sides of project	California Fire Code, Section 503.1.1 Central Fire District, Sec. No. FPB-59 (10/13/2023)	Redesign to provide on-site access by fire fighting equipment to all sides of the structure
Inadequate on-site access for fire fighting equipment	Fire Access Diagram (Sheet AP0.52 of Applicant's submittal)	California Fire Code, Section 503	Redesign to provide on-site

requires reliance on adjacent property, impeding evacuation of Dominican Oaks in a fire emergency	proposed firetruck locations impede evacuation	Central Fire District, Sec. No. FPB-59 (10/13/2023)	access by fire district vehicles and apparatus to all sides of the structure without impeding evacuation routes for Dominican Oaks residents
	Possible inadequate turn-around radius on Dominican Oaks private driveway	California Fire Code, Section 503 Central Fire District, Sec. No. FPB-59 (10/13/2023)	Redesign to provide on-site access by fire district vehicles and apparatus to all sides of the structure without impeding evacuation routes for Dominican Oaks residents
	Possible dead end limitations	California Fire Code, Section 503 Central Fire District, Sec. No. FPB-59 (10/13/2023) County Posted "Dead End & No Truck Turnaround" sign on Paul Sweet Road	Redesign to provide on-site access by fire district vehicles and apparatus to all sides of the structure without impeding evacuation routes for Dominican Oaks residents
	Private driveway dimensions, vehicle weights	California Fire Code, Section 503 Central Fire District, Sec. No. FPB-59 (10/13/2023)	Redesign to provide on-site access by fire district vehicles and apparatus to all sides of the structure without impeding evacuation routes for Dominican Oaks residents
Increased risk of inadequate fire suppression abilities at Dominican Oaks if the proposed residential tower relies in any way on fire hydrants, water supply, or fire pump on Dominican oaks property	Fire Hydrant Location & Spacing	California Fire Code, 507.5, Appendix C NFPA 24 (private fire service mains)	Require on-site fire hydrant(s) sufficient to service all sides of the structure without relying on Dominican Oaks fire suppression system and water pressure
Inadequate on-site access for fire fighting equipment requires reliance on adjacent property, impeding evacuation of Dominican Oaks in a fire emergency	Aerial Equipment Access for buildings exceeding 30 feet in height	California Fire Code, Section D104.1 California Fire Code, Appendix D105	Redesign to provide on-site aerial access route between 15 and 30 feet from the building on all sides, including along Paul Sweet Road, and positioned parallel to one entire side of the structure
Increased risk of fire spreading to adjacent and neighboring properties if fire flow requirements for parking garage rely in any part on Dominican Oaks fire suppression equipment, water supply, and fire pump	Water Supply & Fire Sprinkler Demands for parking garage	NFPA 13, Extra Hazard Group	Demonstrate satisfaction of fire flow GPM and pressure requirements for automatic sprinkler system Install ground water storage tank and fire pump
Increased risk inadequate fire suppression abilities at Dominican Oaks if the proposed residential tower relies in any way on fire hydrants, water supply, or fire pump on Dominican oaks property	Public Water Supply	California Fire Code, Section 507	Demonstrate satisfaction of fire flow GPM requirements for project without reliance on private hydrants, water supply or water pressure from Dominican Oaks

Inadequate separation of proposed building on east side from Dominican Oaks meal service area and occupied residential units increases the risk of personal injury, property damage, and fire spreading due to collapse of east wall of proposed building	Collapse Zones	NFPA 1550: Standard for Emergency Responder Health and Safety (2024) U.S. Department of Health & Human Services, National Institute for Occupational Safety and Health (NIOSH)	Redesign to increase side- and rear-yard setbacks to eliminate or reduce the threat of personal injury to firefighters and residents of Dominican Oaks, and property damage, from a fire spreading to Dominican Oaks
Increased fire risk to Dominican Oaks	Wildland-Urban Interface The parcel is in a "Moderate Fire Hazard Severity Zone."	California Wildland-Urban Interface Code adopted by Santa Cruz County	Require additional analysis and consideration of restrictions on building materials, architectural coatings, property line or adjacent building setbacks design of defensible

Parking Insufficiency

Note: relying on U.S. Census data, only five percent (5%) of households county-wide do not have access to vehicles. Relying on walkscore.com, the project's address is car dependent.

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Possible first responder impediments to proposed residential tower and Dominican Oaks due to illegal parking along Paul Sweet Road	Illegal parking along Paul Sweet Road	California Vehicle Code Section 22500	Require additional analysis of impacts to first responder access of parking on both sides of Paul Sweet Road Redesign to accommodate on-site parking, perhaps as surface parking
Public safety	Illegal parking along Paul Sweet Road giving rise to vagrancy, personal hygiene activity, drug activity, trash dumping, property damage at Cemetery and adjacent properties	Posted current restriction of overnight parking along west side of Paul Sweet Road - see photo attached	Redesign to accommodate on-site parking, perhaps as surface parking Require a Parking Management Plan approved by County
Possible first responder impediments to proposed residential tower and Dominican Oaks and Dominican Hospital Emergency Room due to spillover parking along Paul Sweet Road	Illegal parking at Dominican Oaks, Cemetery, and Dominican Hospital	Spillover parking intrusions onto private properties proximate to the project California Vehicle Code Section 22500	Redesign to accommodate on-site parking, perhaps as surface parking Require a Parking Management Plan approved by County

Air Quality

Note #1: "Sensitive receptors are children, elderly…and others who are at heightened risk of negative health outcomes due to exposure to air pollutants. The locations where these sensitive receptors congregate are considered sensitive receptor locations." California Health and Safety Code 42705.5(a)(5)

Note #2: "…and health care facilities such as hospitals or retirement or nursing homes." Monterey Bay Air Resources Board.

Note #3: Dominican Oaks does not have air conditioning and relies on the flow of air into and through individual residences and common areas by way of opening doors and windows to outside air, thus directly exposing residents to air quality impacts.

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Toxic Air Contaminant - Cancer Risk per million population	Health Risk Assessment (HRA) for cancer risk exceeded threshold	Monterey Bay Air Resources District (MBARD) California Office of Environmental Health Hazard Assessment (OEHHA)	Utilize Tier 4 emission standards for all equipment exceeding 25 horse[power - reducing emissions by ~90% from pre-Tier 4
Toxic Air Contaminant - PM 2.5 associated with vehicle exhaust, especially construction equipment	PM2.5 health effects assessed through ambient concentration-response relationships using Bay Area Air Quality Maintenance District thresholds	Monterey Bay Air Resources District (MBARD) California Office of Environmental Health Hazard Assessment Bay Area Air Quality Maintenance District	Utilize Tier 4 emission standards for all equipment exceeding 25 horse[power - reducing emissions by ~90% from pre-Tier 4
In the event of a 6-12 month construction season: Criteria Air Pollutant Emissions during construction: Reactive Organic Gases (ROG)		Monterey Bay Air Resources District (MBARD)	Require low-VOC architectural coatings; Limit daily application rates of such coatings; Require & implement construction idling limitations Require use of newer, low-emission equipment Require scheduling practices to reduce peak ozone precursor emissions.

Noise

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Substantial risk of offensive noise experienced by sensitive receptor residents at Dominican Oaks	"Offensive noise" means any noise which is loud, boisterous, irritating…or that is unreasonably distracting in any other manner such that it is	Santa Cruz County Code Section 8.30	Require application of Best Management Practices consistent with General Plan Policy 9.2.6

	likely to disturb people of ordinary sensitivities in the vicinity of such noise, and includes… noise made by…any device, tool, construction, vehicle…machine, implement or instrument."		
Construction noise would be experienced for more than 7 seven days by elderly residents of Dominican Oaks	Compliance with General Plan Policy 9.2.6	County General Plan Policy 9.2.6	Require exhaust mufflers that are in good condition on all internal-combustion engine-driven equipment Limit unnecessary idling of internal combustion engines Locate stationary noise-generating equipment as far away as possible from sensitive receptors
Excessive and offensive noise experienced by elderly residents of Dominican Oaks during construction of proposed development	Construction noise during grading of the site could reach 82 dBA, exceeding the 75 dBA threshold established in General Plan Policy 9.2.6	County General Plan Policy 9.2.6 County Code Section 8.30	Same as above
Excessive vibration experienced by elderly residents of Dominican Oaks during construction of proposed development	Compliance with General Plan Policy 9.2.6	Federal Transportation Administration (FTA) Transit Noise and Impact Assessment Manual, FTA Report No. 0123, U.S. Department of Transportation, February 27, 2020	Do not allow impact pile-driving If pile-driving is allowed, prepare and submit to the County for review and written approval a Construction Vibration Plan limiting the distance between operating pile drivers and the nearest structures and sensitive receptors Provide for a Disturbance Coordinator to investigate claims of and when necessary impose penalties for excessive vibration

Civil Engineering

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Ensure adequate sewer capacity and service for proposed development without disrupting service to Dominican Oaks	Sewer Easement required	See County's proposed Condition of Approval	Impose Condition of Approval to ensure access to sewer system without disrupting service to Dominican Oaks

Ensure adequate sewer capacity and service for proposed development without disrupting service to Dominican Oaks	Increased sewer flows may stress the capacity of any shared system or public system	See County's proposed Condition of Approval	Detailed study by County's sanitation district regarding condition of system and capacity to accommodate additional flows from the 105-unit apartment tower

FAA & Helipad Access

Note: Dominican Hospital experienced 272 emergency helicopter arrivals and take-offs on the previous twelve months.

Health or Safety Impact	Description	Identified Written Public Policy Standards or Conditions	Recommended Action
Possible intrusion of proposed building into protected airspace, increasing the risk of collision between helicopters and the proposed building and resulting personal injury and property damage	The proposed residential tower appears not to intrude into the airspace threshold for the hospital helipad. The nearest elevation difference is ~9 feet absent information about antennae, satellite dishes, or other possible vertical features on the rooftop.	FAA Advisory Circular 150/5390-2D, Heliport Design Final Approach and Takeoff Area (FATO)	Require obstacle lights 18 inches above the highest structure, antennae, satellite dish, or equipment on the roof of the tower to protect the airspace and residential structures proximate to the tower for helicopter operations during nighttime or inclement weather Require residents of the residential tower to sign an avigation and noise easement and waiver of objection to helicopter noise

Outlook

3500 Paul Sweet Rd Proposed Project- Adverse Health and Safety Impacts

3500 Paul Sweet Development Consultant Reports.zip;

****CAUTION:This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email.****

Good Morning Commissioners, County Counsel, and Mr. DiSalvo,

My name is Rachel Howley, and I serve as Vice President of Ancillary Services at Dominican Hospital.

On behalf of CommonSpirit Health, the parent organization of Dominican Hospital and Dominican Oaks, I am submitting the attached consultant reports and supporting documentation for your review and inclusion in the public record regarding the proposed development at 3500 Paul Sweet Road.

In response to the Commission's previous request for clear, substantive evidence of the project's potential health and safety impacts, CommonSpirit Health has proactively retained independent experts across multiple disciplines to evaluate the proposed development and its implications for our healthcare campus, surrounding infrastructure, and the vulnerable population residing at Dominican Oaks.

The attached materials include the following:

- **FirstCarbon Solutions – Jackie Winkel:** Environmental review and CEQA-related concerns, including potential impacts to the healthcare environment.
- **Walker Consultants – Jeff Weckstein:** Parking, transportation, traffic circulation, and impacts to emergency access.
- **Cornerstone Engineering – Ryan Haley:** Civil engineering, site design, infrastructure, and associated code compliance concerns.
- **SCOCTEC – Robert Solomon:** Fire and life safety, emergency vehicle access, and evacuation considerations.

- **Landrum and Brown – James Terry, AVP:** Aviation planning, airspace considerations, and implications for hospital helicopter operations.
- **Santa Cruz County Ambulance Response Data:** Documentation of existing emergency response and transport challenges within our community.
- **Health and Safety Impact Summary Grid:** A consolidated review of identified project deficiencies, applicable code concerns, corresponding health and safety risks, and the minimum conditions necessary to mitigate those impacts.

Collectively, these reports identify significant concerns across several critical areas, including fire and life safety, emergency access and evacuation, parking and transportation, civil engineering and utilities, air quality, noise and vibration, construction impacts, and aviation safety.

These are not simply concerns about the inconvenience of a neighboring development. They represent substantive risks to emergency response, the safe operation of a critical healthcare corridor, and the protection of patients, hospital staff, and the elderly residents of Dominican Oaks.

Dominican Hospital treated more than 52,000 emergency patients last year. With county ambulance transport times already exceeding 40 minutes in some instances, maintaining unobstructed and reliable emergency access is essential. The proposed development, as currently designed, introduces additional conflicts that could compromise access to our Emergency Department and the ability of emergency responders to safely reach and evacuate Dominican Oaks residents.

Our position remains unchanged: CommonSpirit Health will not grant easements to accommodate this proposed development. The project must demonstrate that it can be constructed and operated without relying on our property or compromising the emergency access, egress, evacuation, and safety of our hospital or senior living community.

We respectfully urge the Planning Commission to carefully review the attached independent expert findings and consider the full extent of these impacts before taking any action. We request denial of the project as currently proposed.

We appreciate the Commission's continued attention to these matters and its responsibility to protect the health, safety, and welfare of our community. Our commitment is to ensuring that Dominican Hospital and Dominican Oaks can continue providing essential healthcare and residential services without preventable risks created by incompatible development.

Thank you for your time and consideration.

Respectfully,

--

Rachel Howley
