TOM BURNS, PLANNING DIRECTOR

February 12, 2008

Planning Commission County of Santa Cruz 701 Ocean Street Santa Cruz, CA 95060 Agenda Date: April 9, 2008

APN: 106-171-10 Application: 07-0575

ltem #: 12 Time: After 9 AM

Subject: A public hearing to consider a proposal to rezone a single lot of record from the Special Use (SU) zone district to the Timber Production (TP) zone district.

Members of the Commission:

On September 20, 2007, the County Planning Department accepted this application for a rezoning to Timber Production (TP). This is a proposal to rezone a 5.6-acre parcel from the Special Use (SU) zone district to the Timber Production (TP) designation. The uses on the property consist of vacant rural acreage.

Background

This project qualifies for a rezoning under California Government Code Section 51113. This section allows a property owner to petition the County to rezone land to the TP zone. The requirements for this type of rezoning are listed in Government Code section $51113(c)^1$. The County may not place any additional requirements on this petition to rezone the property to TP. County Code Section 13.10.375(c)—"Zoning to the TP District" implements Government Code section 51113 and specifies the six criteria which must be met in order to rezone to TP.

¹ c) On or before March 1, 1977, the board or council by ordinance shall adopt a list of criteria required to be met by parcels being considered for zoning as timberland production under this section.

The criteria shall not impose any requirements in addition to those listed in this subdivision and in subdivision (d). The following shall be included in the criteria:

⁽¹⁾ A map shall be prepared showing the legal description or the assessor's parcel number of the property desired to be zoned.

⁽²⁾ A plan for forest management shall be prepared or approved as to content, for the property by a registered professional forester. The plan shall provide for the eventual harvest of timber within a reasonable period of time, as determined by the preparer of the plan.

^{(3) (}A) The parcel shall currently meet the timber stocking standards as set forth in Section 4561 of the Public Resources Code and the forest practice rules adopted by the State Board of Forestry and Fire Protection for the district in which the parcel is located, or the owner shall sign an agreement with the board or council to meet those stocking standards and forest practice rules by the fifth anniversary of the signing of the agreement. If the parcel is subsequently zoned as timberland production under subdivision (a), failure to meet the stocking standards and forest practice rules within this time period provides the board or council with a ground for rezoning of the parcel pursuant to Section 51121.

⁽B) Upon the fifth anniversary of the signing of an agreement, the board shall determine whether the parcel meets the timber stocking standards in effect on the date that the agreement was signed.

Notwithstanding the provisions of Article 4 (commencing with Section

^{51130),} if the parcel fails to meet the timber stocking standards, the board or council shall immediately rezone the parcel and specify a new zone for the parcel, which is in conformance with the county general plan and whose primary use is other than timberland.

⁽⁴⁾ The parcel shall be timberland, as defined in subdivision (f) of Section 51104.

⁽⁵⁾ The parcel shall be in compliance with the compatible use ordinance adopted by the board or council pursuant to Section 51111.

⁽d) The criteria required by subdivision (c) may also include any or all of the following:

⁽¹⁾ The land area concerned shall be in the ownership of one person, as defined in Section 38106 of the Revenue and Taxation Code, and shall be comprised of single or contiguous parcels of a certain number of acres, not to exceed 80 acres.

⁽²⁾ The land shall be a certain site quality class or higher under

In accordance with County Code Section 13.10.375(c), the project meets the following six criteria for rezoning to Timber Production:

- 1. A map has been submitted with the legal description or assessor's parcel number of the property to be rezoned.
- 2. A Timber Management Plan, undated, prepared by a registered professional forester has been submitted for the property (Exhibit E).
- 3. The parcel currently meets the timber stocking standards as set forth in Section 4561 of the Public Resources Code and the Forest Practice Rules for the district in which the parcel is located (see Exhibit E).
- 4. The parcel is timberland, as the entire parcel is capable of producing a minimum of 15 cubic feet of timber per acre annually and is almost entirely located within a mapped Timber Resource area.
- 5. The uses on the parcel are in compliance with the Timber Production Zone uses set forth in Section 13.10.372.
- 6. The land area to be rezoned is in the ownership of one person, as defined in Section 38106 of the Revenue and Taxation Code, and is comprised of at least five acres in area.

This project qualifies for a statutory exemption (Exhibit D) in accordance with the California Environmental Quality Act and the County Environmental Review Guidelines (Article 17, Section 1703).

Conclusion

All of the criteria have been met for rezoning this parcel to the Timber Production zoning designation. All required findings can be made to approve this application and the rezoning is consistent with the General Plan policies and land use designations.

Recommendation

Staff recommends that your Commission adopt the attached Resolution (Exhibit A), sending a recommendation to the Board of Supervisors for approval of Application No. 07-0575 based on the attached findings (Exhibit B).

DECOL	TITTONING	
RESOL	UTION NO.	

On the motion of Commissioner duly seconded by Commissioner the following Resolution is adopted:

PLANNING COMMISSION RESOLUTION SENDING RECOMMENDATION TO THE BOARD OF SUPERVISORS ON PROPOSED AMENDMENT TO THE ZONING ORDINANCE

WHEREAS, the Planning Commission has held a public hearing on Application No.07-0575 involving property located on the north side of Skid Road, approximately .75 of a mile east of the intersection with Eureka Canyon Road, and the Planning Commission has considered the proposed rezoning, all testimony and evidence received at the public hearing, and the attached staff report.

NOW, THEREFORE, BE IT RESOLVED, that the Planning Commission recommends that the Board of Supervisors adopt the attached ordinance amending the Zoning Ordinance by changing property from the Special Use (SU) district to the Timber Production zone district.

BE IT FURTHER RESOLVED, that the Planning Commission makes findings on the proposed rezoning as contained in the Report to the Planning Commission.

ORDINANCE NO.

ORDINANCE AMENDING CHAPTER 13 OF THE SANTA CRUZ COUNTY CODE CHANGING FROM ONE ZONE DISTRICT TO ANOTHER

The Board of Supervisors of the County of Santa Cruz ordains as follows:

SECTION I

The Board of Supervisors finds that the public convenience, necessity and general welfare require the amendment of the County Zoning Regulations to implement the policies of the County General Plan and Local Coastal Program Land Use Plan regarding the timber resource property located on the north side of Skid Road, approximately .75 of a mile east of the intersection with Eureka Canyon Road; finds that the zoning to be established herein is consistent with all elements of the Santa Cruz County General Plan and the Santa Cruz County Code, as modified by the *Big Creek* decision; and finds and certifies that the project is subject to a statutory exemption under the California Environmental Quality Act.

SECTION II

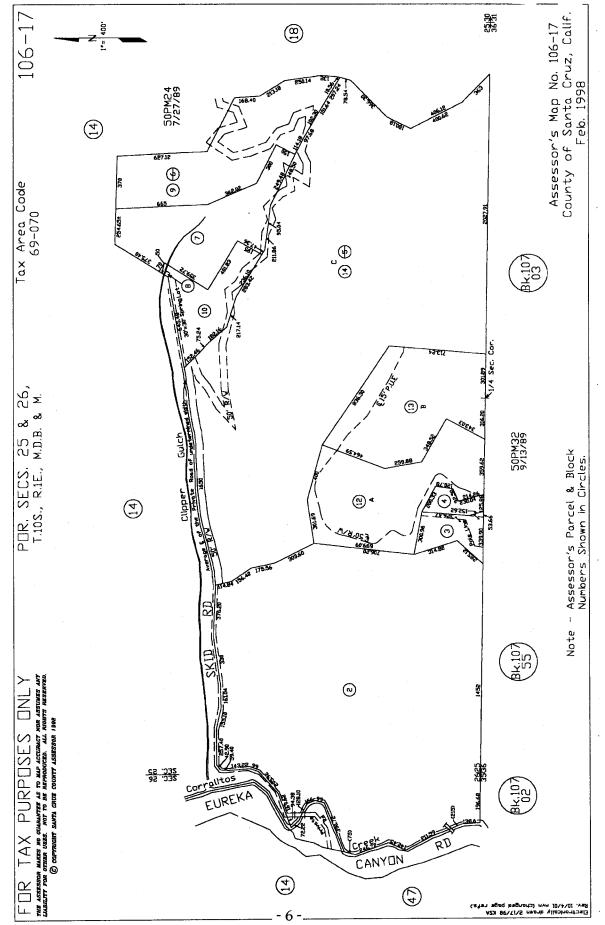

The Board of Supervisors hereby adopts the Zoning Plan Amendment as described in Section III, and adopts the findings in support thereof without modification as set forth below:

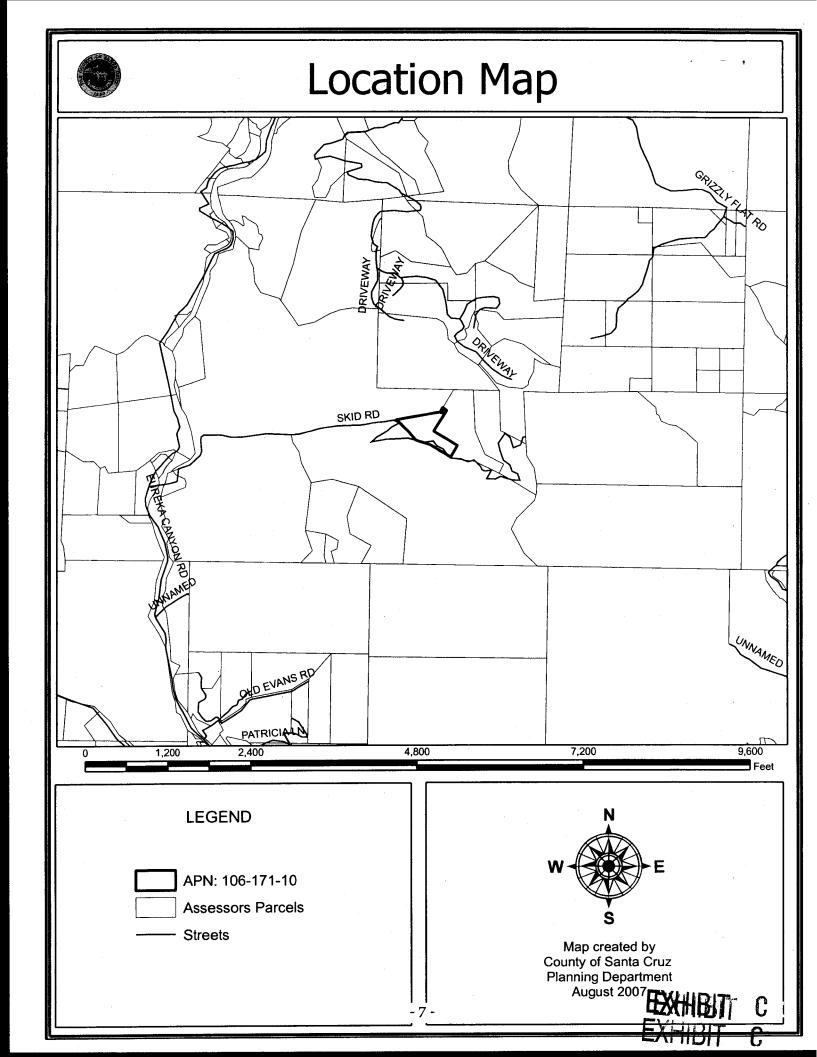

- 1. The proposed zone district will allow a density of development and types of uses which are consistent with the objectives and land use designations of the adopted General Plan; and
- 1. The proposed zone district is appropriate for the level of utilities and community services available to the land; and
- 2. The character of development in the area where the land is located has changed or is changing to such a degree that the public interest will be better served by a different zone district; and
- 3. The property meets the requirements of Government Code section 51113 or 51113.5 and County Code Section 13.10.375(c).

SECTION III

Chapter 13.10 - Zoning Regulations of the Santa Cruz County Code is hereby amended by amending Section 13.10.210 - Zoning Plan to change the following properties from the existing zone district to the new zone district as follows:

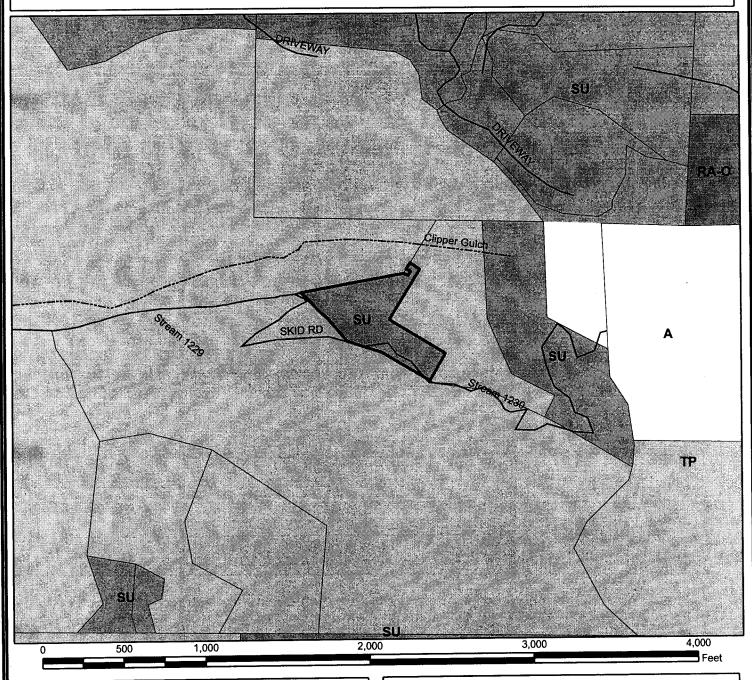

Assessor's	Parcel Number	Existing Zone District	New Zone District
106-	171-10	Special Use (SU)	TP
		SECTION IV	
This ordinance	ce shall take effect or	n the 31 st day after the date	of final passage.

Timber Management Plan

Lands of Frankoni Eureka Canyon Santa Cruz County

APN# 106-171-10
Portion of Section 25
Township 10 South
Range 1 East
Mount Diablo Base & Meridian

Report Prepared By Joseph Culver, Consulting Forester December 28, 2007

PREFACE

In December of 2007, Joseph Culver, Consulting Forester, was commissioned by Richard Frankoni to prepare a Timber Management Plan for APN# 106-171-10. The county assessor lists the parcel as 5.7 acres in size. Mr. Frankoni would like to rezone the parcel to Timber Production and the TMP will be part of an application packet submitted to the County of Santa Cruz. The management plan incorporates field work and currently available resource data.

GENERAL PROPERTY DESCRIPTION

The property is located several miles north of the Community of Corralitos approximately ½ mile east of Eureka Canyon Road. The property is located in Clipper Gulch which drains into Corralitos Creek. The property is located at the junction of two swales which slope to the west. The southern portion of the property has more gentle slopes, with steeper slopes leading into Clipper Gulch.

Elevation ranges from 980 feet at the junction of the two swales to 1,260 feet along the eastern boundary. The legal description of the parcel is Township 10 South, Range 1 East, portion of section 25. Timber site classification throughout the timbered portions of the property is site III.

The entire property is coniferous forest. This forest contains primarily second growth redwood trees with only one or two Douglas-firs observed. A dense stand of medium to large sized redwoods forms an almost continuous redwood canopy. Redwood stocking levels are highest on the lower slopes of the property near seasonal and perennial water sources. Hardwood species of tanoak and Pacific madrone are interspersed through the forest, primarily as an intermediate species. Hardwood species are the dominant tree in some small areas along the upper slope of the property.

Understory species throughout the property are typical of conifer forests in the Santa Cruz Mountains and include tanoak seedlings, poison oak, sword fern, woodwardia fern, and French broom along a seasonal road.

The property is underlain by the Ben Lomond-Felton complex. The Ben Lomond and Felton soils are deep and well drained. Ben Lomond soils formed in residuum derived from sandstone or granitic rock and Felton formed from sandstone, shale, schist, or silt stone. Permeability of the Ben Lomond soil is moderately rapid while permeability of the Felton soil is moderately slow. Effective rooting depth of the complex is 40-70 inches. Runoff is rapid, and the hazard of erosion is high. According to the Natural Resources Conservation Service, these soils are well suited to the production of timber.

December 28, 2007

1

TIMBER HARVEST HISTORY

The old-growth redwood logging in the Santa Cruz area, including this property, occurred approximately 110 years ago. As was common throughout the area, this clear-cut logging was often followed by fire, usually intentionally set to burn bark and slash. Fire scars on the old-growth stumps are evidence of this fire activity. Based on stumps observed in the field, and statements by Mr. Frankoni, the property appears to have been next harvested about 20-25 years ago. Under this harvest, approximately 40-50% of the larger second growth redwood trees were removed.

MANAGEMENT OBJECTIVES AND GOALS

Once the property is rezoned, Mr. Frankoni intends to manage the forest land for high quality forest products, while enhancing the related values of aesthetics and wildlife. As there has been no harvesting on the property for approximately 20-25 years the next harvest could occur anytime in the near future. Although State law allows for a harvest every 10 years, due to the small size of the timbered area it is recommended that future harvesting be spaced at a 15-20 year interval to maximize the volume removed in each harvest, and to minimize neighborhood impacts. Future harvests should focus on the following objectives:

- 1. Prescribe and implement a forest improvement program to improve stocking, increase tree vigor and maximize growth.
- 2. Maintain a healthy and vigorous forest of well-spaced trees growing at the highest rates feasible considering the other values of the forest.
- 3. Maintain a high degree of aesthetic consideration during all aspects of forest management.
- 4. Maintain wildlife habitat as part of continuing forest management.

RECOMMENDED LOGGING SYSTEM

The property was tractor logged during the last timber harvest. Further harvesting infrastructure would be developed during preparation of a Timber Harvest Plan.

PRESENT AND FUTURE STAND CONDITIONS

In December of 2007 a 5% timber inventory was conducted on the property to determine conifer volume per acre, species composition, basal area, stocking levels and stand growth. The stand data gathered from this inventory, combined with onsite observations made by the professional forester preparing this report, show that the 5.7 acres of coniferous forest have the following approximate stand conditions:*

Species Composition 99% second growth redwood,

1% Douglas-fir

Basal Area 190 square feet per acre

Gross Volume/acre (redwood) 37,500 board feet Gross Volume/acre (Douglas-fir) 400 board feet Gross Overall property volume 216,000 board feet

The volume per acre and overall property volume stated previously are gross volumes. In general, the net volume will be about 10% less due to fire scar, rot and other minor defects in the standing timber. With these factors in mind the overall net conifer volume on the property is approximately 194,400 board feet.

Increment boring data gathered during the timber inventory combined with general tree growth rates in the Santa Cruz Mountains indicate that the conifer component of the forest is growing at an approximate rate of 2.3% per year. This growth rate is below the average for managed stands of second growth trees as the property has not been recently harvested and growth rates have begun to decline. A growth rate of 2.3% per year equates to an annual increase in the conifer resource of 4,970 board feet over the entire property. Converting this figure to cubic feet gives a current growth rate of 414 cubic feet over the entire property, or 73 cubic feet per acre per year. This exceeds the required average of 15 cubic feet per acre per year to classify a property as timberland.

*Limitation: This data is based on a field sample and an extrapolated growth rate for the previous ten years. This data should only be used as a guide for management purposes, and should not be extended or taken out of context for other purposes.

OTHER PROPERTY USES

The property is currently used as watershed and wildlife habitat.

CONCLUSION

The property is well suited for timber management into the future. The forest resource is currently healthy but growth rates have begun to decline due to overstocked stand conditions. Mr. Frankoni has indicated that he wants to manage the timber resource and stand conditions warrant a harvest in the near future.

TIMBER STOCKING: To rezone a property to the "Timber Production" zoning a property must meet the timber stocking standards set forth in Section 4561 of the Public Resources Code. Section 4561 states in part that "The average residual basal area, measured in stems one inch or larger in diameter.....in areas which the registered professional forester has determined are site II classification or lower, the minimum average residual basal area shall be 50 square feet per acre. Rock outcroppings and other areas not normally bearing timber shall not be considered as requiring stocking." The average conifer residual basal area in the timbered portions of the property is 190 square feet and therefore meets the stocking standards.

TIMBERLAND: To rezone a property to the "Timber Production" zoning a property must meet the definition of timberland. Section 51104 of the California Code states that "Timberland means privately owned land......capable of growing an average annual volume of wood fiber of at least 15 cubic feet per acre." The property proposed for rezoning is capable of growing an annual average volume of coniferous wood fiber of 73 cubic feet per acre and therefore meets the definition of timberland.

COMPATIBLE USE: Existing infrastructure on the property does not significantly detract from the use of the property for, or inhibit, growing and harvesting timber.
